This comprehensive and well-organised book deals with some of the basic issues associated with business ethics and value systems. It presents the views of different schools of thought on this subject and dissects the phenomenon of corruption to expose its root causes. The book provides a critical analysis of this social epidemic that forces corporates to become corrupt and remain unethical. Besides, it describes a few popular ethical theories, some of the key issues that affect ethical decision process and the role of total quality management in ensuring practice of good workplace ethics. Primarily intended for the postgraduate students of management and commerce, the book can also be used beneficially by practicing professionals. Key Features Presents more than forty live cases that show a cross-section view of different types of unethical practices. Gives model ethical codes for a few professions. Provides spreadsheets to enable satisfactory compliance with legal and statutory requirements.

Practical Business Research Methods

This guide demonstrates to students the importance of a scientific approach to business research and problem-solving projects. It shows how to formulate a problem and choose a research method, and how to argue and motivate. The book discusses the practicalities of research such as problem formulation, relating the research to previous studies, choosing the right methodology, presentation of results, report writing and drawing conclusions. This work is intended for MBA/MSc and undergraduate students doing business studies, business administration, economics, finance and marketing courses. Consultants and organizations undertaking research in business studies should also find this a useful text.

The Journal of Business and Social Studies

Thanks to the omnipresent computer, current statistics can include data files of many thousands of values, and can perform any exploratory analysis in less than seconds. This development, however fascinating, generally does not lead to simple results. We should not forget that clinical studies are, mostly, for confirming prior hypotheses based on sound arguments, and the simplest tests provide the best power and are adequate for such studies. In the past few years the authors of this 5th edition, as teachers and research supervisors in academic and top-clinical facilities, have been able to closely observe the latest developments in the field of clinical data analysis, and they have been able to assess their performance. In this 5th edition the 47 chapters of the previous edition have been maintained and upgraded according to the current state of the art, and 20 novel chapters have been added after strict selection of the most valuable and promising novel methods. The novel methods are explained using practical examples and step-by-

step analyses readily accessible for non-mathematicians. All of the novel chapters have been internationally published by the authors in peer-reviewed journal, including the American Journal of Therapeutics, the European Journal of Clinical Investigation, The International journal of Clinical Pharmacology and therapeutics, and other journals, and permission is granted by all of them to use this material in the current book. We should add that the authors are well-qualified in their fields of knowledge. Professor Zwinderman is president-elect of the International Society of Biostatistics, and Professor Cleophas is past-president of the American College of Angiology. From their expertise they should be able to make adequate selections of modern methods for clinical data analysis for the benefit of physicians, students, and investigators. The authors, although from a different discipline, one clinician and one statistician, have been working and publishing together for over 10 years, and their research of statistical methodology can be characterized as a continued effort to demonstrate that statistics is not mathematics but rather a discipline at the interface of biology and mathematics. They firmly believe that any reader can benefit from this clinical approach to statistical data analysis.
