Sustainable Food Production Practices in the Caribbean

This study represents a first attempt of providing a comprehensive quantification of educational outcomes in the Caribbean region. Its main objectives are: (a) to define a set of operationally relevant education indicators (b) to provide a database of comparable education indicators in Caribbean countries where data is available, namely Belize, Dominica, Dominican Republic, Grenada, Guyana, Jamaica, St Kitts and Nevis, St Lucia, St Vincent and the Grenadines and Trinidad and Tobago and (c) to propose methods on how the common set of indicators can be used for analyses of the education sectors. This exercise is all the more important within the framework of the current Education For All (EFA) and Millenium Development Goals (MDGs) initiatives which require the identification and monitoring of relevant indicators to establish where the countries stand in relation to the target of universal primary education. After a systematic review of educational indicators in coverage, efficiency and quality which leads to specific recommendations on the type of indicator relevant to operational diagnostics of the education sectors, the study provides a detailed

review of the Caribbean status in producing education indicators and demonstrates how a new database can be used to depict where the education sectors stand. Building on these methods and findings, its final section presents a set of specific recommendations to the Caribbean countries on how to improve the diagnostics of their education sectors.

Report

This book is a printed edition of the Special Issue "Environmentally Sustainable Livestock Production" that was published in Sustainability

The Repertory of Arts, Manufactures, and Agriculture

Offers a six-level course for primary and all-age schools. This book introduces a concept in course material for the Caribbean. It includes many Social Studies activities, and is illustrated with photographs and colour artwork.

Monitoring Educational Performance in the Caribbean

For CXC students who want to prepare fully for their exams, CXC Study Guides are a series of titles that provide students with additional support to pass the exam. CXC Study Guides are a unique product that have been written by experienced examiners at CXC and carry the board's exclusive branding.

The CSEC® Physics Concise Revision Course provides full coverage of the CSEC® Physics syllabus. This book provides comprehensive and authoritative guidance for the course. It adopts a practical, supportive approach to help students with their learning. Revision exam and assessment guidance questions throughout consolidate this learning. * Comprehensive coverage of the CSEC® Physics course, presented in an engaging, full-colour format* Revision questions at the end of each topic help to secure knowledge and understanding* Exam-style questions at the end of each section provide effective practice for the actual exam* Answers are available for free at www.collins.co.uk/caribbean

Multiple Choice Questions for CXC Agricultural Science

The CARICOM Bibliography

Sustainable Food Production Practices in the Caribbean addresses the issue of sustainable agriculture from a practical perspective. Although the scientific and technological aspects are given attention, the authors use their accumulated research and field experiences to focus on tested, simple production systems and practices that sustain soil

fertility, ecosystems and people. In so doing, they consistently advocate crop and livestock production techniques that require an agro-ecological approach, aimed at reducing the use of water, chemicals and pesticides and the preservation of the region's soils. This volume fills a void in this important area of Caribbean development: from the large scale farming organizations to the small farming communities that are the backbone of agriculture in the region; from undergraduates at the newly energized Faculty of Food and Agriculture at the University of the West Indies, St Augustine campus and other tertiary agriculture training institutions around the region to a young generation of students who now have the opportunity to sit for the new examination in Food and the Environment offered by the Caribbean Examinations Council at advanced (CAPE) certificate level. This book will also be a useful tool for agriculture extension officers and policymakers who are called upon to provide advice and leadership in the promotion of sustainable food production in the Caribbean. The 20 chapters in Sustainable Food Production Practices are comprehensive in their coverage of issues that go beyond primary food production to include often neglected areas such as post harvest, quality assurance, local regional and international marketing, post-production methods and systems and sustainable nutritional practices. Throughout, the emphasis is on simple, jargon-free descriptions, instructions and recommendations, supported by a variety of charts, tables and numerous full-colour photographs that richly illustrate key elements of the text.
