Transformers: A Visual History

The Art of DOOM: Eternal

It's the ultimate art tome for the iconic Devil May Cry franchise! Collected are materials from all four classic Devil May Cry games and the Devil May Cry anime series. Inside you'll find character artwork, weapon designs, creatures, locations, and more. Also included are over 20-pages of exclusive interviews with the developers and artists behind the long-running series, as well as plenty of creator commentary!

This IBM® Redbooks® publication provides guidance about how to configure, monitor, and manage your IBM DS8880 storage systems to achieve optimum performance, and it also covers the IBM DS8870 storage system. It describes the

DS8880 performance features and characteristics, including hardware-related performance features, synergy items for certain operating systems, and other functions, such as IBM Easy Tier® and the DS8000® I/O Priority Manager. The book also describes specific performance considerations that apply to particular host environments, including database applications. This book also outlines the various tools that are available for monitoring and measuring I/O performance for different server environments, and it describes how to monitor the performance of the entire DS8000 storage system. This book is intended for individuals who want to maximize the performance of their DS8880 and DS8870 storage systems and investigate the planning and monitoring tools that are available. The IBM DS8880 storage system features, as described in this book, are available for the DS8880 model family with R8.0 release bundles (Licensed Machine Code (LMC) level 7.8.0).

New look, a hard cover version for Der Mond! Stylish, delicate, and consistently edgy, Der Mond collects the color illustrations of Yoshiyuki Sadamoto, perhaps the most acclaimed manga and anime artist of all time. The book includes 74 pages of paintings and designs devoted to Neon Genesis Evangelion, plus another 50 pages from The Wings of Honneamise, Nadia--The Secret of Blue Water, Blue Uru, and other works--including Sadamoto's cover to Eric Clapton's 1998 album, Pilgrim.

Der Mond: The Art of Neon Genesis Evangelion

The fourth edition of "The Chemistry of the Actinide and Transactinide Elements" comprises all chapters in volumes 1 through 5 of the third edition (published in 2006) plus a new volume 6. To remain consistent with the plan of the first edition, " to provide a comprehensive and uniform treatment of the chemistry of the actinide [and transactinide] elements for both the nuclear technologist and the inorganic and physical chemist," and to be consistent with the maturity of the field, the fourth edition is organized in three parts. The first group of chapters follows the format of the first and second

editions with chapters on individual elements or groups of elements that describe and interpret their chemical properties. A chapter on the chemical properties of the transactinide elements follows. The second group, chapters 15-26, summarizes and correlates physical and chemical properties that are in general unique to the actinide elements, because most of these elements contain partially-filled shells of 5f electrons whether present as isolated atoms or ions, as metals, as compounds, or as ions in solution. The third group, chapters 27-39, focuses on specialized topics that encompass contemporary fields related to actinides in the environment, in the human body, and in storage or wastes. Two appendices at the end of volume 5 tabulate important nuclear properties of all actinide and transactinide isotopes. Volume 6 (Chapters 32 through 39) consists of new chapters that focus on actinide species in the environment, actinide waste forms, nuclear fuels, analytical chemistry of plutonium, actinide chalcogenide and hydrothermal synthesis of actinide compounds. The subject and author indices and list of contributors encompass all six volumes.

Electrolytes for Lithium and Lithium-Ion Batteries

This volume contains the Proceedings of the 2nd International Workshop on Information Processing in Sensor Networks (IPSN 2003). The workshop was held at the Palo Alto Research Center (PARC), Palo Alto, California, on April 22-23, 2003. Information processing in sensor networks is an interdisciplinary research area with deep connections to signal processing, networking and protocols, databases and information management, as well as distributed algorithms. Because of advances in MEMS microsensors, wireless networking, and embedded processing, ad hoc networks of sensors are becoming increasingly available for commercial and military applications such as environmental monitoring (e.g., traffic, habitat, security), industrial sensing and diagnostics (e.g., factories, appliances), infrastructure maintenance (e.g., power grids, water distribution, waste disposal), and battlefield awareness (e.g., multitarget tracking). From the engineering and computing point of view, sensor networks have become a rich source of problems in communication protocols, sensor tasking and control, sensor fusion, distributed databases and algorithms, probabilistic reasoning, system/software architecture, design methodologies, and evaluation metrics. This workshop took a systemic approach to address crosslayer issues, from the physical sensor layer to the sensor signal processing and networking levels and then all the way to the applications. Following the successful 1st Workshop on Collaborative Signal and Information Processing in Sensor Networks at PARC in 2001, this new workshop brought together researchers from academia, industry, and government to present and discuss recent work concerning various aspects of sensor networks such as information organization, querying, routing, and self-organization, with an emphasis on the high-level information processing tasks that these networks are designed to perform.

This book constitutes the refereed proceedings of the First International Workshop on Numerical Analysis and Its

Applications, WNAA'96, held in Rousse, Bulgaria, in June 1996. The 57 revised full papers presented were carefully selected and reviewed for inclusion in the volume; also included are 14 invited presentations. All in all, the book offers a wealth of new results and methods of numerical analysis applicable in computational science, particularly in computational physics and chemistry. The volume reflects that the cooperation of computer scientists, mathematicians and scientists provides new numerical tools for computational scientists and, at the same time, stimulates numerical analysis.

Filling the gap between publications for industrial developers and academic researchers on graphene synthesis and its applications, this book presents the essential aspects for the successful upscaling of graphene production. After an introduction to graphene, its synthesis and characterization, the text covers a wide variety of graphene composites and compounds. The larger part of the book discusses various applications where graphene has been successfully integrated into technologies, including uses in the energy sector, oil and gas industry, biomedical areas, sensors and coatings. Finally, the book concludes with a summary and a look at the future of graphene technology, including a market review. With its focus on applications, this is equally useful for both academic and industrial users.

This analysis of aspects of Australian Aboriginal culture explores a number of Dreamtime myths, songlines, ceremonies and spiritual practices. Discusses topics such as kinship, totems, women's and men's business and the role of rituals in daily life. Lavishly illustrated. Includes an introduction giving an overview of Aboriginal history, references, a bibliography and an index. Voight is the author of 'New Visions New Perspectives' and co-author of 'Fire and Shadow: Spirituality in Contemporary Australian Art'. Drury is a publishing director and author of over 40 books, including 'The Elements of Shamanism' and 'Images in Contemporary Australian Painting'.

Mergent Bond Record

This book provides an update on recent clinical practice and an in-depth view of selected topics relevant to hospital medicine. It is divided into four sections that explore clinical, administrative, systems and ethical issues. Each section

places an emphasis on the opportunities, challenges and potential directions of this burgeoning subspecialty. An important topic covered extensively is how hospitalists are being called to lead on the current opioid epidemic, given that they are well-suited in responding to complicated challenges crossing all specialties. Other chapters explore worldwide practice patterns and practical application of philosophical tools in daily practice. This up-to-date resource provides hospitalists, advanced nurse practitioners, medical students and administrators with the latest research, trends and issues in hospital medicine.

Celebrating 35 years of rare and iconic TRANSFORMERS imagery, this deluxe art book will delight fans of all ages! One of the world's most popular franchises, Transformers has been delighting fans since 1984. Now, in this deluxe hardcover celebration, Hasbro reveals behind-the-scenes production sketches, beautifully polished final art, and everything in-between. From the obscure to the iconic, this book features packaging artwork, animation models, video game designs, comic pages, and, for the first time ever, production artwork from all six Paramount live-action films! Lovingly curated by Transformers archivist Jim Sorenson, this is the most comprehensive collection of Transformers imagery ever assembled. © 2019 Hasbro. All Rights Reserved.

This book presents the concepts and algorithms of advanced industrial process control and on-line optimization within the framework of a multilayer structure. It describes the interaction of three separate layers of process control: direct control, set-point control, and economic optimization. The book features illustrations of the methodologies and algorithms by worked examples and by results of simulations based on industrial process models.

Sincerely welcome to proceedings of the 1st International Conference on Trust and Privacy in Digital Business, Zaragoza, Spain, held from August 30th to September 1st, 2004. This conference was an outgrowth of the two successful TrustBus international workshops, held in 2002 and 2003 in conjunction with the DEXA conferences in Aix-en-Provence and in Prague. Being the first of a planned series of successful conferences it was our goal that this event would initiate a forum to bring together researchers from academia and commercial developers from industry to discuss the state of the art of technology for establishing trust and privacy in digital business. We thank you all the attendees for coming to Zaragoza to participate and debate the new emerging advances in this area. The conference program consisted of one invited talk and nine regular technical papers sessions. The invited talk and keynote speech was delivered by Ahmed Patel from the Computer Networks and Distributed Systems Research Group, University College Dublin, Ireland on "Developing Secure, Trusted and Auditable Services for E-Business: An Autonomic Computing Approach". A paper covering his talk is also contained in this book. The regular paper sessions covered a broad range of topics, from access control - sues to electronic voting, from trust and protocols to digital rights management. The conference attracted close to 100 submissions of which the program committee - cepted 29 papers for presentation and inclusion in the conference proceedings.

This book discusses the roles of nanostructures and nanomaterials in the development of battery materials for state-of-the-art electrochemical energy storage systems, and provides detailed insights into the fundamentals of why batteries need nanostructures and nanomaterials. It explores the advantages offered by nanostructure electrode materials, the challenges of using nanostructured materials in batteries, as well as the rational design of nanostructures and nanomaterials to achieve optimal battery performance. Further, it closely examines the latest advances in the application of nanostructures and nanomaterials for future rechargeable batteries, including high-energy and high-power lithium ion batteries, lithium metal batteries (Li-O₂, Li-S, Li-Se, etc.), all-solid-state batteries, and other metal batteries (Na, Mg, Al, etc.). It is a valuable reference resource for readers interested in or involved in research on energy storage, energy materials, electrochemistry and nanotechnology.

Land use and land cover (LULC) as well as its changes (LUCC) are an interplay between bio-geophysical characteristics of the landscape and climate as well as the complex human interaction including its different patterns of utilization superimposed on the natural vegetation. LULC is a core information layer for a variety of scientific and administrative tasks (e.g. hydrological modelling, climate models, land use planning). In particular in the context of climate change with its impacts on socio-economic, socio-ecologic systems as well as ecosystem services precise information on LULC and LUCC are mandatory baseline datasets required over large areas. Remote sensing can provide such information on different levels of detail and in a homogeneous and reliable way. Hence, LULC mapping can be regarded as a prototype for integrated approaches based on spaceborne and airborne remote sensing techniques combined with field observations. The book provides for the first time a comprehensive view of various LULC activities focusing on European initiatives, such as the LUCAS surveys, the CORINE land covers, the ESA/EU GMES program and its resulting Fast-Track- and Downstream Services, the EU JRC Global Land Cover, the ESA GlobCover project as well as the ESA initiative on Essential Climate Variables. All have and are producing highly appreciated land cover products. The book will cover the operational approaches, but also review current state-of-the-art scientific methodologies and recommendations for this field. It opens the view with best-practice examples that lead to a view that exceeds pure mapping, but to investigate into drivers and causes as well as future projections.

Formal concept analysis has been developed as a field of applied mathematics based on the mathematization of concept and concept hierarchy. It thereby allows us to mathematically represent, analyze, and construct conceptual structures. The formal concept analysis approach has been proven successful in a wide range of application fields. This book constitutes a comprehensive and systematic presentation of the state of the art of formal concept analysis and its applications. The first part of the book is devoted to foundational and methodological topics. The contributions in the second part demonstrate how formal concept analysis is successfully used outside of mathematics, in linguistics, text retrieval, association rule mining, data analysis, and economics. The third part presents applications in software engineering.

Electrolytes for Lithium and Lithium-ion Batteries provides a comprehensive overview of the scientific understanding and technological development of electrolyte materials in the last several years. This book covers key electrolytes such as LiPF₆ salt in mixed-carbonate solvents with additives for the state-of-the-art Li-ion batteries as well as new electrolyte materials developed recently that lay the foundation for future advances. This book also reviews the characterization of electrolyte materials for their transport properties, structures, phase relationships, stabilities, and impurities. The book discusses in-depth the electrode-electrolyte interactions and interphasial chemistries that are key for the successful use of the electrolyte in practical devices. The Quantum Mechanical and Molecular Dynamical calculations that has proved to be so powerful in understanding and predicating behavior and properties of materials is also reviewed in this book. Electrolytes for Lithium and Lithium-ion Batteries is ideal for electrochemists, engineers, researchers interested in energy science and technology, material scientists, and physicists working on energy.

Nanostructured Materials for Next-Generation Energy Storage and Conversion: Photovoltaic and Solar Energy, is volume 4 of a 4-volume series on sustainable energy. Photovoltaic and Solar Energy while being a comprehensive reference work, is written with minimal jargon related to various aspects of solar energy and energy policies. It is authored by leading experts in the field, and lays out theory, practice, and simulation studies related to solar energy and allied applications including

policy, economic and technological challenges. Topics covered include: introduction to solar energy, fundamentals of solar radiation, heat transfer, thermal collection and conversion, solar economy, heating, cooling, dehumidification systems, power and process heat, solar power conversion, policy and applications pertinent to solar energy as viable alternatives to fossil fuels. The aim of the book is to present all the information necessary for the design and analysis of solar energy systems for engineers, material scientists, economics, policy analysts, graduate students, senior undergraduates, solar energy practitioner, as well as policy or lawmakers in the field of energy policy, international energy trade, and libraries which house technical handbooks related to energy, energy policy and applications.

Praise for Private Capital Markets Valuation, Capitalization, and Transfer of Private Business Interests SECOND EDITION "In the years since publication of the first edition of Private Capital Markets, the concepts and ideas that it presents have been widely accepted by progressive members of the business valuation community. Now with the Second Edition, author Rob Slee has included empirical data on capital markets for midsized businesses. This book remains a must for everyone involved in appraising, buying, selling, or financing privately owned businesses." —Raymond C. Miles, founder, The Institute of Business Appraisers "The Graziadio School of Business has used the Private Capital Markets book for several years with

great success. This course, along with the Pepperdine Private Capital Markets Survey project, has helped our students better prepare for careers in middle market companies." —Linda Livingstone, Dean of the Graziadio School of Business and Management, Pepperdine University "Our international association of independent M&A professionals recommends this text as the most comprehensive foundation for understanding the private capital marketplace. This book is essential reading for middle market M&A advisors, investors, and other decision-makers in the private capital markets." —Mike Nall, founder, Alliance of M&A Advisors A practical road map for making sound investment and financing decisions based on real experiences and market needs Now fully revised and in a second edition, Private Capital Markets provides lawyers, accountants, bankers, estate planners, intermediaries, and other professionals with a workable framework for making sound investment and financing decisions based on their own needs and experiences. This landmark resource covers: Private business valuation Middle market capital sources The business ownership transfer spectrum And much more Private Capital Markets, Second Edition surveys the private capital markets and presents the proven guidance you need to navigate through these uncharted waters.

Showcasing recent developments in inorganic materials in an area of societal interest and importance, this book provides an up-to-date introduction to the contemporary use of functional solids in emerging technologies. Energy Storage and Conversion Materials describes the application of inorganic materials in the storage and conversion of energy, with an emphasis on how solid-state chemistry allows development of new functional solids for energy applications. Dedicated chapters cover co-electrolysis, low temperature fuel cells, oxide thermoelectric devices for energy conversion, solid-state Li batteries and thermochemical energy conversion. Edited and written by world-renowned scientists, this book will provide a comprehensive introduction for advanced undergraduates, postgraduates and researchers wishing to learn about the topic.
