America: Pathways to the Present

Americans are greatly concerned about the number of our troops killed in battle--100,000 dead in World War I; 300,000 in World War II; 33,000 in the Korean War; 58,000 in Vietnam; 4,500 in Iraq; over 1,000 in Afghanistan--and rightly so. But why are we so indifferent, often oblivious, to the far greater number of casualties suffered by those we fight and those we fight for? This is the compelling, largely unasked question John Tirman answers in *The Deaths of Others*. Between six and seven million people died in Korea, Vietnam, and Iraq alone, the majority of them civilians. And yet Americans devote little attention to these deaths. Other countries, however, do pay attention, and Tirman argues that if we want to understand why there is so much anti-Americanism around the world, the first place to look is how we conduct war. We understandably strive to protect our own troops, but our rules of engagement with the enemy are another matter. From atomic weapons and carpet bombing in World War II to napalm and daisy cutters in Vietnam and beyond, we have used our weapons intentionally to kill large numbers of civilians and terrorize our adversaries into surrender. Americans, however, are mostly ignorant of these facts, believing that American wars are essentially just, necessary, and "good." Tirman investigates the history of casualties caused by

American forces in order to explain why America remains so unpopular and why US armed forces operate the way they do. Trenchant and passionate, *The Deaths of Others* forces readers to consider the tragic consequences of American military action not just for Americans, but especially for those we fight.

Worldview

This is the story of a small group of soldiers from the 101st Airborne Division's fabled 502nd Infantry Regiment—a unit known as “the Black Heart Brigade.” Deployed in late 2005 to Iraq's so-called Triangle of Death, a veritable meat grinder just south of Baghdad, the Black Hearts found themselves in arguably the country's most dangerous location at its most dangerous time. Hit by near-daily mortars, gunfire, and roadside bomb attacks, suffering from a particularly heavy death toll, and enduring a chronic breakdown in leadership, members of one Black Heart platoon—1st Platoon, Bravo Company, 1st Battalion—descended, over their year-long tour of duty, into a tailspin of poor discipline, substance abuse, and brutality. Four 1st Platoon soldiers would perpetrate one of the most heinous war crimes U.S. forces have committed during the Iraq War—the rape of a fourteen-year-old Iraqi girl and the cold-blooded execution of her and her family. Three other 1st Platoon soldiers would be overrun at a remote outpost—one killed immediately and two taken from the scene, their mutilated corpses found days later booby-trapped with explosives. *Black Hearts* is an unflinching account of the

epic, tragic deployment of 1st Platoon. Drawing on hundreds of hours of in-depth interviews with Black Heart soldiers and first-hand reporting from the Triangle of Death, Black Hearts is a timeless story about men in combat and the fragility of character in the savage crucible of warfare. But it is also a timely warning of new dangers emerging in the way American soldiers are led on the battlefields of the twenty-first century. From the Hardcover edition.

Prescription for Survival

When we want advice from others, we often casually speak of "getting some feedback." But how many of us give a thought to what this phrase means? The idea of feedback actually dates to World War II, when the term was developed to describe the dynamics of self-regulating systems, which correct their actions by feeding their effects back into themselves. By the early 1970s, feedback had become the governing trope for a counterculture that was reoriented and reinvigorated by ecological thinking. The Culture of Feedback digs deep into a dazzling variety of left-of-center experiences and attitudes from this misunderstood period, bringing us a new look at the wild side of the 1970s. Belgrad shows us how ideas from systems theory were taken up by the counterculture and the environmental movement, eventually influencing a wide range of beliefs and behaviors, particularly related to the question of what is and is not intelligence. He tells the story of a generation of Americans who were struck by

a newfound interest in--and respect for--plants, animals, indigenous populations, and the very sounds around them, threading his tapestry with cogent insights on environmentalism, feminism, systems theory, and psychedelics. The Culture of Feedback repaints the familiar image of the '70s as a time of Me Generation malaise to reveal an era of revolutionary and hopeful social currents, driven by desires to radically improve--and feed back into--the systems that had come before.

For Small Creatures Such as We

The Cold War shaped the world we live in today - its politics, economics, and military affairs. This book shows how the globalization of the Cold War during the last century created the foundations for most of the key conflicts we see today, including the War on Terror. It focuses on how the Third World policies of the two twentieth-century superpowers - the United States and the Soviet Union - gave rise to resentments and resistance that in the end helped topple one superpower and still seriously challenge the other. Ranging from China to Indonesia, Iran, Ethiopia, Angola, Cuba, and Nicaragua, it provides a truly global perspective on the Cold War. And by exploring both the development of interventionist ideologies and the revolutionary movements that confronted interventions, the book links the past with the present in ways that no other major work on the Cold War era has succeeded in doing.

Man Without a Gun

The “dean of Cold War historians” (The New York Times) now presents the definitive account of the global confrontation that dominated the last half of the twentieth century. Drawing on newly opened archives and the reminiscences of the major players, John Lewis Gaddis explains not just what happened but why—from the months in 1945 when the U.S. and the U.S.S.R. went from alliance to antagonism to the barely averted holocaust of the Cuban Missile Crisis to the maneuvers of Nixon and Mao, Reagan and Gorbachev. Brilliant, accessible, almost Shakespearean in its drama, *The Cold War* stands as a triumphant summation of the era that, more than any other, shaped our own. Gaddis is also the author of *On Grand Strategy*.

Cold War on Maplewood Street

The Global Cold War

In this new edition of his classic 1970 memoir about the notorious U-2 incident, pilot Francis Gary Powers reveals the full story of what actually happened in the most sensational espionage case in Cold War history. After surviving the shoot-down of his reconnaissance plane and his capture on May 1, 1960, Powers endured sixty-one days of rigorous interrogation by the KGB, a public trial, a conviction for

espionage, and the start of a ten-year sentence. After nearly two years, the U.S. government obtained his release from prison in a dramatic exchange for convicted Soviet spy Rudolph Abel. The narrative is a tremendously exciting suspense story about a man who was labeled a traitor by many of his countrymen but who emerged a Cold War hero.

The Cutting Edge

The Callendar Effect

Guy Stewart Callendar (1898–1964) is noted for identifying, in 1938, the link between the artificial production of carbon dioxide and global warming. Today this is called the “Callendar Effect.” He was one of Britain’s leading steam and combustion engineers, a specialist in infrared physics, author of the standard reference book on the properties of steam at high temperatures and pressures, and designer of the burners of the notable World War II airfield fog dispersal system, FIDO. He was keenly interested in weather and climate, taking measurements so accurate that they were used to correct the official temperature records of central England and collecting a series of worldwide weather data that showed an unprecedented warming trend in the first four decades of the twentieth century. He

formulated a coherent theory of infrared absorption and emission by trace gases, established the nineteenth-century background concentration of carbon dioxide, and suggested that its atmospheric concentration was rising due to human activities, which was causing the climate to warm. Callendar's contributions to climatology led the way in the mid-twentieth-century transition from the traditional practice of gathering descriptive climate statistics to the new and exciting field of climate dynamics. In the first half of the twentieth century, the carbon dioxide theory of climate change had fallen out of favor with climatologists.

The most powerful force in the world economy today is the redefinition of the relationship between state and marketplace - a process that goes by the name of privatization though this term is inadequate to express its far-reaching changes. We are moving from an era in which governments sought to seize and control the 'commanding heights' of the economy to an era in which the idea of free markets is capturing the commanding heights of world economic thinking. Basic views of how society ought to be organized are undergoing rapid change, trillions of dollars are changing hands and so is fundamental political power. Great new wealth is being created - as are huge opportunities and huge risks. Taking a worldwide perspective, including Britain, where the process began with Mrs Thatcher, Europe and the former USSR, China, Latin America and the US, THE COMMANDING HEIGHTS shows how a revolution in ideas is transforming the world economy - why

it is happening, how it can go wrong and what it will mean for the global economy going into the twenty-first century.

The Enduring Vision, Volume II: Since 1865

The Deaths of Others

The Cold War may be over, but the United States is still practicing Cold War foreign policies. From the Persian Gulf to El Salvador, from Bosnia to Somalia, U.S. policymakers continue to rely on force, threats, arms, and military aid. A fundamental redefinition of national security—beyond war and militarization, beyond bilateralism, beyond sovereign states—is long overdue. In *Security Without War*, a dynamic author team lays out new principles and policies for the United States to adopt in a post-Cold War world. Shuman and Harvey encourage Americans to take account of all threats (not just military ones), to emphasize preventing conflicts over winning wars, to enhance every nation's security (including that of its enemies), to favour multilateral approaches over bilateral ones, and to promote greater citizen participation in foreign policy. Throughout, they show how military, political, economic, and environmental security interests are all linked—and how emphasizing one over the others can undermine the

nation's safety. Security Without War brings together for the first time the major elements of post-Cold War security thought. The authors show how a new framework for U.S. international relations can enhance U.S.-and indeed, global-security at a substantially lower cost.

We is the first book from the daughter of Carl Sagan and Ann Druyan--a luminous exploration of Earth's marvels that require no faith in order to be believed. "What is the meaning of life? Sagan finds its meaning everywhere--with her family, around the world, and especially among the stars of the cosmos. Read her work; you'll have a deeper appreciation for your every step, every bite, and every breath." --Bill Nye

Sasha Sagan was raised by secular parents, the astronomer Carl Sagan and the writer and producer Ann Druyan. They taught her that the natural world and vast cosmos are full of profound beauty, that science reveals truths more wondrous than any myth or fable. When Sagan herself became a mother, she began her own hunt for the natural phenomena behind our most treasured occasions--from births to deaths, holidays to weddings, anniversaries, and more--growing these roots into a new set of rituals for her young daughter that honor the joy and significance of each experience without relying on religious framework. As Sagan shares these rituals, *For Small Creatures Such as We* becomes a moving tribute to a father, a newborn daughter, a marriage, and the natural world--a celebration of life itself, and the power of our families and beliefs to bring us together.

Vietnam. Now, writing with the same sharp, richly expressive language, the same edgy dark humor and complete honesty, and the same rawness of nerve and energy, Tim O'Brien gives us an equally powerful novel about growing up as a child of anxiety—the big anxiety, the one that's been with us since the fifties, when we finally realized that Einstein's theories translated into Russian. It's 1995 and William Cowling is digging a hole in his backyard. He is forty-nine, and after years and years of pent-up terror he has finally found the courage of a fighting man. And so a hole. A hole that he hopes will one day be large enough to swallow up his almost fifty years' worth of fear. A hole that causes his twelve-year-old daughter to call him a "nutto," and his wife to stop speaking to him. A hole that William will not stop digging and out of which rise scenes of his past to play themselves out in his memory. The scenes take him back to his quietly peculiar adolescence (No. 2 pencils had a surprising significance), to his college days, down into the underground, and up through several stabs at "normal" adulthood . . . they take him from Montana to Florida, from Cuba to California, from Kansas to New York to Germany and back to Montana as he makes his way through an often mystifying—but just as often hilarious—labyrinth of fears and desires, obsessions and obligations, blessed madness and less-than-blessed sobriety . . . they take him into the lives of a shrink who's a whiz, a role reversal and of a dizzying eccentric cheerleader; of radical misfits and misfit radicals; of an ethereal stewardess (the traveling man's dream); and two guerilla commandos who mix shtick and nightmare in their tactical brew. And each scene is a reminder of the unbargained-

for-terror that has guided him to the bottom of his hole. For this digging is his final act of “prudence and sanity”—he’s taking control, getting there first, robbing his fears of their power to destroy . . . or so he believes. But is this act really sane? Is his daughter’s estimation of his emotional well-being (“pretty buggo, too”) the only truly sane statement being made? Is sanity even the issue? In the dazzling final scenes, William turns from the hole—from his past and from his future 0 to himself, digging deeper and deeper to find his answers. The Nuclear Age is pyrotechnically funny and moving, courageous and irreverent. It takes on our supreme unacknowledged terror (whose reality we both refuse to accept and all too easily accommodate ourselves to), finds it lunatic core, and shapes it into a story that speaks of, and to, an entire age: our own, our nuclear age. It is an extraordinary novel.
