Explore the complexities of international independent child migration. This volume gives particular focus to agency and vulnerability as central concepts for understanding the diverse experiences of children who have migrated alone. Combining perspectives from academics and practitioners, the volume is filled with thought-provoking insights into the nature of current programmatic interventions for independent child migrants. It further invites critical reflection on the complex socio-economic, political, and cultural contexts in which migration decisions are taken. Contributors recognize that independent child migrants, despite vulnerabilities, are active decision-makers in determining movement, responding to violent and discriminatory situations, resisting stereotypical assumptions, and figuring out integration and life choices as these are shaped by existing structural opportunities and constraints. This is the 136th volume in this series. Its mission is to provide scientific and scholarly presentations on cutting edge issues and concepts in child and adolescent development. Each volume focuses on a specific new direction or research topic and is edited by experts on that topic.

This book, the first in the “Wildlife Research Monograph” series, defines “wildlife research” in a variety of contexts and reviews recent research trends. The authors present the current developments they have identified using bibliometric analyses of the most common, relevant and emerging topics in wildlife research over the last three decades. Diverse aspects of wildlife research are discussed, including wildlife demography, infections spread between wildlife, livestock and humans, habitat requirements and management, as well as the effects of renewable energy and pollutants on wildlife. Furthermore the authors explore topics like advances in the study of species distribution, invasive species, use of molecular markers in wildlife studies and the sustainability of wildlife exploitation and conservation conflicts. The book offers a comprehensive overview of advances in wildlife research in the last decades.

The Royal Colloquium

Hungarian Book Review

In each year between 1994 and 1996, more than 7,000 individuals received a Ph.D. in life-science, and the number of graduates is rising sharply. If present trends continue, about half of those graduates will have found permanent positions as independent researchers within ten years after graduation. These statistics--and the labor market situation they reflect--can be viewed either positively or negatively depending on whether one is a young scientist seeking a career or an established investigator whose productivity depends on the labor provided by an abundant number of graduate students. This book examines the data concerning the production of doctorates in life-science and the changes in the kinds of positions graduates have obtained. It discusses the impact of those changes and suggests ways to deal with the challenges of supply versus demand for life-science Ph.D. graduates. Trends in the Early Careers of Life Scientists will serve as an information resource for young scientists deciding on career paths and as a basis for discussion by educators and policymakers as they examine the current system of education linked to research and decide if changes in that system are needed.

Rules of The Trade: Indispensable Insights for Online Profits

In order to chart the way for long-term policies in the field of public health, the Dutch government needs to have the best possible insight into potential future trends and the problems to which these could give rise. It was with a view to compiling a number of long-range studies that the independent Steering Committee on Future Health Scenarios was set up in 1983. In 1985 the Steering Committee appointed a board of experts to conduct a long-range study of "Accidents and traumatology" (traumatology being that aspect of medicine concerned with the treatment of accident victims). In close consultation with this board, the Institute of Public Health and Social Medicine of the Erasmus University Rotterdam carried out a scenario study, the results of which are briefly summarized below.

0.1 Aims and approach The research had two objectives: To explore possible "autonomous" developments (in the sense of being independent of government intervention) in the field of accidents and the treatment of accident victims. To specify the effects of possible policy measures, in relation to both the prevention of accidents and improvements in the care for accident victims. The research was exploratory rather than predictive. It did not go beyond the year 2000, since it was felt that the pace of change in this field ruled out looking much further than ten to fifteen years ahead.

PILGRIM'S PROGRESS: TRENDS AND CONVERGENCE IN RESEARCH ON ORGANIZATIONAL SIZE AND ENVIRONMENTS

This volume includes the full proceedings from the 2016 Academy of Marketing Science (AMS) Annual Conference held in Orlando, Florida, entitled Creating Marketing Magic and Innovative Future Marketing Trends. The marketing environment continues to be dynamic. As a result, researchers need to adapt to the ever-changing scene. Several macro-level factors continue to play influential roles in changing consumer lifestyles and business practices. Key factors among these include the increasing use of technology and automation, while juxtaposed by nostalgia and "back to the roots" marketing trends.

At the same time, though, as marketing scholars, we are able to access emerging technology with greater ease, to undertake more rigorous research practices. The papers presented in this volume aim to address these issues by providing the most current research from various areas of marketing research, such as consumer behavior, marketing strategy, marketing theory, services marketing, advertising, branding, and many more. Founded in 1971, the Academy of Marketing Science is an international organization dedicated to promoting timely explorations of phenomena related to the science of marketing in theory, research, and practice. Among its services to members and the community at large, the Academy offers conferences, congresses, and symposia that attract delegates from around the world. Presentations from these events are published in this Proceedings series, which offers a comprehensive archive of volumes reflecting the evolution of the field. Volumes deliver cutting-edge research and insights, complementing the Academy's flagship journals, the Journal of the Academy of Marketing Science (JAMS) and AMS Review. Volumes are edited by leading scholars and practitioners across a wide range of subject areas in marketing science.

Information Systems for Business and Beyond

Trends in U.S. R & D Funding for

In the five decades since NASA was created, the agency has sustained its legacy from the National Advisory Committee on Aeronautics (NACA) in playing a major role in U.S. aeronautics research and has contributed substantially to United States preeminence in civil and military aviation. This preeminence has contributed significantly to the overall economy and balance of trade of the United States through the sales of aircraft throughout the world. NASA's contributions have included advanced flight control systems, de-icing devices, thrust-vectoring systems, wing fuselage drag reduction configurations, aircraft noise reduction, advanced transonic airfoil and winglet designs, and flight systems. Each of these contributions was successfully demonstrated through NASA flight research programs. Equally important, the aircraft industry would not have

adopted these and similar advances without NASA flight demonstration on full-scale aircraft flying in an environment identical to that which the aircraft are to operate-in other words, flight research. Flight research is a tool, not a conclusion. It often informs simulation and modeling and wind tunnel testing. Aeronautics research does not follow a linear path from simulation to wind tunnels to flying an aircraft. The loss of flight research capabilities at NASA has therefore hindered the agency's ability to make progress throughout its aeronautics program by removing a primary tool for research. Recapturing NASA's Aeronautics Flight Research Capabilities discusses the motivation for NASA to pursue flight research, addressing the aspects of the committee's task such as identifying the challenges where research program success can be achieved most effectively through flight research. The report contains three case studies chosen to illustrate the state of NASA ARMD. These include the ERA program and the Fundamental Research Program's hypersonics and supersonics projects. Following these case studies, the report describes issues with the NASA ARMD organization and management and offers solutions. In addition, the chapter discusses current impediments to progress, including demonstrating relevancy to stakeholders, leadership, and the lack of focus relative to available resources. Recapturing NASA's Aeronautics Flight Research Capabilities concludes that the type and sophistication of flight research currently being conducted by NASA today is relatively low and that the agency's overall progress in aeronautics is severely constrained by its inability to actually advance its research projects to the flight research stage, a step that is vital to bridging the confidence gap. NASA has spent much effort protecting existing research projects conducted at low levels, but it has not been able to pursue most of these projects to the point where they actually produce anything useful. Without the ability to actually take flight, NASA's aeronautics research cannot progress, cannot make new discoveries, and cannot contribute to U.S. aerospace preeminence.

In the realm of health care, privacy protections are needed to preserve patients' dignity and prevent possible harms. Ten years ago, to address these concerns as well as set guidelines for ethical health research, Congress called for a set of federal standards now known as the HIPAA Privacy Rule. In its 2009 report, *Beyond the HIPAA Privacy Rule: Enhancing Privacy, Improving Health Through Research*, the Institute of Medicine's Committee on Health Research and the Privacy of Health Information concludes that the HIPAA Privacy Rule does not protect privacy as well as it should, and that it impedes important health research.

Adenocarcinomas: New Insights for the Healthcare Professional: 2011 Edition

ÔThis is an enlightening text on the subject of employment and work relations that will be useful for students in economics, specifically those studying labor relations. Õ Ñ Lucy Heckman, American Reference Books Annual 2012 The broad field of employment relations is diverse and complex and is under constant development and reinvention. This Research Handbook discusses fundamental theories and approaches to work and employment relations, and their connection to broader political and societal changes occurring throughout the world. It provides comprehensive coverage of work and employment relations theory and practice. This up-to-date research compendium has drawn together a range of international authors from diverse disciplinary backgrounds. There are chapters from labour historians, theoreticians, more mainstream industrial relations scholars, sociologists, organizational psychologists, geographers, policy advisors, economists and lawyers. At the heart of each chapter is the notion that the world of work and employment relations has changed substantially since the halcyon days of IR, throughout the Dunlop Era of the 1950s. However, many areas of enquiry remain, and more questions have developed with society and technology. This Handbook reflects this view. As the field of study and practice continues to evolve throughout the twenty-first century, what lessons have we learnt from the past and what can we expect in the future? Academics and postgraduate students researching industrial relations, human resource management, employment relations, industrial sociology and sociology of work will find this important resource invaluable.

Obesity Interventions in Underserved Communities

What business is your company really in? That's a question all executives should all ask before demand for their firm's products or services dwindles. In Marketing Myopia, Theodore Levitt offers examples of companies that became obsolete

because they misunderstood what business they were in and thus what their customers wanted. He identifies the four widespread myths that put companies at risk of obsolescence and explains how business leaders can shift their attention to customers' real needs instead.

Working Solo Sourcebook

The obesity epidemic has a disproportionate impact on communities that are hard-hit by social and economic disadvantages. In *Obesity Interventions in Underserved Communities*, a diverse group of researchers explores effective models for treating and preventing obesity in such communities. The volume provides overviews of the literature at specific junctures of society and health (e.g., the effectiveness of preschool obesity prevention programs), as well as commentaries that shape our understanding of particular parts of the obesity epidemic and field reports on innovative approaches to combating obesity in racial/ethnic minority and other medically underserved populations in the United States. Authors make specific recommendations to policy makers which are designed to reverse the rising rate of obesity dramatically. The thirty-one literature reviews, commentaries, and field reports collected here address obesity prevention and treatment programs implemented across a spectrum of underserved populations, with particular attention paid to children and adolescents. Aimed at students, clinicians, and community workers in public health and health policy, as well as family medicine and pediatrics, sociology, childhood education, and nutrition—and deeply informed by fieldwork—this book demonstrates the importance of taking a full contextual view, both historical and current, when considering the challenge of reversing upward

obesity trends among ethnic minorities, impoverished people, and other underserved populations.
