### The Natural and the Artefactual

This is the official CHFI (Computer Hacking Forensics Investigator) study guide for professionals studying for the forensics exams and for professionals needing the skills to identify an intruder's footprints and properly gather the necessary evidence to prosecute. The EC-Council offers certification for ethical hacking and computer forensics. Their ethical hacker exam has become very popular as an industry gauge and we expect the forensics exam to follow suit. Material is presented in a logical learning sequence: a section builds upon previous sections and a chapter on previous chapters. All concepts, simple and complex, are defined and explained when they appear for the first time. This book includes: Exam objectives covered in a chapter are clearly explained in the beginning of the chapter, Notes and Alerts highlight crucial points, Exam's Eye View emphasizes the important points from the exam's perspective, Key Terms present definitions of key terms used in the chapter, Review Questions contains the questions modeled after real exam questions based on the material covered in the chapter. Answers to the questions are presented with explanations. Also included is a full practice exam modeled after the real exam. The only study guide for CHFI, provides 100% coverage of all exam objectives. CHFI Training runs hundreds of dollars for self tests to thousands of dollars for classroom training.

Mind-opening writing on what kids need from school, from one of education's most outspoken voices. Almost no writer on schools asks us to question our fundamental assumptions about education and motivation as boldly as Alfie Kohn. The Washington Post says that "teachers and parents who encounter Kohn and his thoughts come away transfixed, ready to change their schools." And Time magazine has called him "perhaps the country's most outspoken critic of education's fixation on grades [and] test scores." Here is challenging and entertaining writing on where we should go in American education, in Alfie Kohn's unmistakable voice. He argues in the title essay with those who think that high standards mean joylessness in the classroom. He reflects thoughtfully on the question "Why Self-Discipline Is Overrated." And in an essay for the New York Times, which generated enormous response, he warns against the dangers of both punishing and praising children for what they do instead of parenting "unconditionally." Whether he's talking about school policy or the psychology of motivation, Kohn gives us wonderfully provocative—and utterly serious—food for thought. This new book will be greeted with enthusiasm by his many readers, and by teachers and parents seeking a refreshing perspective on today's debates about kids and schools.

Bill Brewer presents, motivates, and defends a bold new solution to a fundamental problem in the philosophy of perception. What is the correct theoretical conception of perceptual experience, and how should we best understand the most fundamental nature of our perceptual relation with the physical objects in the

world around us? Most theorists today analyse perception in terms of its representational content, in large part in order to avoid fatal problems attending the early modern conception of perception as a relation with particular mind-dependent objects of experience. Having set up the underlying problem and explored the lessons to be learnt from the various difficulties faced by opposing early modern responses to it, Bill Brewer argues that this contemporary approach has serious problems of its own. Furthermore, the early modern insight that perception is most fundamentally to be construed as a relation of conscious acquaintance with certain direct objects of experience is, he claims, perfectly consistent with the commonsense identification of such direct objects with persisting mind-independent physical objects themselves. Brewer here provides a critical, historical account of the philosophy of perception, in order to present a defensible vindication of empirical realism.

Changes and updates since last edition clearly marked, and a comprehensive FAR Index. 2020 marks the 80-year anniversary for ASA and the Boeing 307 Stratoliner (cover photo); these aviation legends also share a birthplace in the Seattle, Washington region. The Stratoliner was the world's first commercial transport aircraft to offer a pressurized cabin allowing for high-altitude flight, the first four-engine airliner in scheduled domestic service, and the first airplane with hydraulically boosted control surfaces. In 1940, as the Stratoliner entered service with Pan American Airways setting new standards for speed and comfort, Aviation Supplies & Academics, Inc. (ASA) began setting the standard for accurate, reliable and trusted training materials and pilot supplies. In its 80-year journey, ASA has evolved to now provide more than 1,000 products serving students, pilots, flight instructors, aviation maintenance technicians, air traffic controllers, career aviators, remote pilots and drone operators.

What is politics? Is it a universal feature of all human societies, past and present? Is it tied to specific institutional arenas? Or is it found in all groups and organizations, large or small, formal or informal? This new textbook seeks to provide answers to these important questions. Starting with what it means to 'think politically', the book goes on to explore a wide range of meanings attributed to the concept of politics from a variety of perspectives and theoretical traditions. It offers succinct and coherent overviews by some of the foremost scholars in the field, and

each invites the reader to see the activity of politics in a distinctive way. Topics covered include politics as a form of rule, feminist approaches to politics, Marxism and politics, the politics of human behaviour, environmental politics, politics as collective choice, and Islam and politics. Written with the new student in mind, this concise introduction to the study and activity of politics is essential reading for all those coming to the discipline for the first time.

In this book, philosopher Keekok Lee challenges one of the central assumptions of contemporary environmentalism: that if we could reduce or eliminate pollution we could 'save' the planet without unduly disrupting our modern, industrialized societies. Lee argues instead that the process of modernization, with its attendant emphasis on technological innovation, has fundamentally transformed 'nature' into just another manmade 'artefact.' Ultimately, what needs to be determined is if nature has value above and beyond human considerations, whether aesthetic, spiritual, or biological. This provocative book attempts to reconfigure environmental ethics, positing the existence of two separate ontological categories--the 'natural' and the 'artefactual.' Natural entities, be they organisms or inert matter, are 'morally considerable' because they possess the ontological value of independence, whereas artefacts are created by humans expressly to serve their own interests and ends.

Gene Control offers a current description of how gene expression is controlled in eukaryotes, reviewing and summarizing the extensive primary literature into an easily accessible format. Gene Control is a comprehensively restructured and expanded edition of Latchman's Gene Regulation: A Eukaryotic Perspective, Fifth Edition. The first part of the book deals with the fundamental processes of gene control at the levels of chromatin structure, transcription, and post-transcriptional processes. Three pairs of chapters deal with each of these aspects, first describing the basic process itself, followed by the manner in which it is involved in controlling gene expression. The second part of the book deals with the role of gene control in specific biological processes. Certain chapters deal with the importance of gene control in cellular signaling processes and for normal development of the embryo. Another chapter discusses the key roles played by gene-regulatory processes in the specification of differentiated cell types such as muscle cells and neurons. The final chapters discuss the consequences of errors in gene control; the relationship between gene misregulation and human diseases, especially cancer; and potential therapies designed specifically to target particular levels of gene control. Gene Control will be of value to students in biological sciences, as well as to scientists and clinicians interested in how genes are regulated in health and disease.

Delta Scout was the call sign for Tony Trethowan's Ground Coverage 'stick' during the Rhodesian bush war of the late seventies. This is the story of an ordinary policeman, a young man who signed up with the British South Africa Police as a raw 18 year old and who was to serve eight years with that fine force. As a young Patrol Officer, he was to experience rural life in remote stations in the bush of Matabeleland. He embraced the experience and learned Sindebele within a few months. The book is richly interspersed with anecdotes of wild frontier life -- of rowdy prospectors, obstreperous farmers, maverick hunters and bizarre eccentrics. He deals with a wide array of crimes and incidents -- from murder, tribal suicide, sorcery, robbery and drunkenness to horrific vehicle accidents. But as the bush war intensifies, Tony finds himself more and more involved in paramilitary operations. Ground Coverage was a BSAP intelligence-gathering unit -- operating literally 'on the ground' in the rural areas. Known by his enemy, Nkomo's ZIPRA guerrillas, as Baleka, or 'he who runs hither and thither' because of his propensity for rapidly covering vast areas, alone in his beaten-up police Land Rover, the second part of the book deals with the author's conversion from civilian policeman to full-blooded counter-insurgency operator in an African guerrilla war. Told with a sensitivity and pathos that is rare in military memoirs, Delta Scout is a brutally honest, compelling account of innocence lost.

Without the close, there is no sale. Pretty obvious, right? Yet, for many salespeople, closing is the most baffling and elusive part of the selling process. All too often, salespeople meet qualified clients and charm them with an eloquent presentation, only to see the sale mysteriously slip from between their fingers in the end. Which is sad when you consider all the hard work - the prospecting, preparation, planning, and practice - done for the sake of a moment of truth that never arrives. Fortunately, closing is an art that can be mastered, and now Sales Closing For Dummies shows you how. Packed with powerful principles that can help you become a top-producing salesperson, Sales Closing For Dummies is the ultimate guide to mastering that most mysterious part of the selling equation. Tom Hopkins, the legendary sales genius who, by age 30 was the nation's leading real-estate trainer, demystifies closing and shows what it takes to be a champion closer, including how to: Lead a sale without being pushy Read the signs of an interested potential buyer Use questioning methods that close sales, time and again Help clients feel good about their buying decisions Keep your clients' business and build their loyalty Build long-term relationships and watch your sales grow With the help of dozens of real-life examples from a wide cross section of

industries, Tom shows why professional selling is about communication, not coercion. And he shares his considerable insight and experience on: Verbal and visual buying cues and how to recognize them Choosing the best location for closing Addressing concerns and creating a sense of urgency Time-tested tactics and strategies for ending customer procrastination, overcoming their fear, closing from a distance, and more The ten biggest closing mistakes and how to avoid them Add-on selling and other ways of getting your clients to help you to build your business Featuring Tom's Hopkins' trademark "Red Flag" key points and situation scripts, this fun, easy-to-understand guide arms you with the hands-on tools and techniques you'll need to become a world-class closer.

CHILI HOT GMAT MATH REVIEW will help readers develop the skills and mindset needed to score high on the quantitative section of the GMAT exam. Each hand-selected problem comes with a Classification, Snapshot, and Chili Rating. Classification serves to identify each problem according to category or sub-category. Snapshot highlights why that particular problem was chosen, including the underlying problem-solving principle or strategic approach. Chili Rating helps candidates gauge the estimated difficulty level of a given problem. A single chili indicates that the estimated difficulty level of a given problem is "mild" (500 to 590 difficulty level), two chilies spell "hot" (600 to 690 difficulty level), and three chilies signal "very hot" (700 or above difficulty level). By studying problems of varying difficulty, candidates will learn to maintain discipline on easy but tricky math problems and also to exercise flexibility when deciding on multiple approaches and time-saving shortcuts for use in tackling harder, more involved problems. Note to readers: This book contains the excerpted math sections from the parent title "Chili Hot GMAT: 200 All-Star Problems to Get You a High Score on Your GMAT Exam."
