US lobbying against Chinese firm Huawei, one of the biggest phone makers and telecommunications kit providers in the world, hit a new level this week during the phone industry's big annual conference. Around 100,000 technology vendors, carriers, and device makers head to Mobile World Congress in Barcelona every year both to strike deals and to

showcase emerging technologies. This year, the conversation was dominated almost exclusively by 5G, as carriers look to introduce next-generation, superfast mobile networks. The conference was heavily sponsored by 5 G companies as most of these Telco will make their big pitch about their 5G capabilities. But looming in the background were the months of negative press about whether Huawei's equipment might to serve as backdoor option The US is worried about China's rising military and economic power. America's lobbying efforts are about more than just protecting the West's nascent 5G networks as the recent trade negotiation saw the outbreak of a rapidly escalating trade war which witness conflicting events of custom tariffs implemenation to a Tit-for-Tat retaliation and now heighten various technological trade restriction between US and all other competing countries for especially 5 G related technological based products This Trade Conflict resemble a proxy for bigger US fears about China's ambition. Citing reports on almost every newsmedia who expresses there seem no doubt China is a significant threat for the United States, they are committed to becoming a lead economic and military power in the world." Eventually the 5 G Elite from China could be in the position where it could interfere with data traffic, sharing usage, or even engaging in proactive activity to extract that information and use it for their own benefit...US Media According to a leading Telco Statistic report , there will be a total of 29 billion connected devices by 2022. "Whoever gets to dominate 5G infrastructure will become the owner of the next generation of the world's telecoms infrastructure," So WHO will come out as the Leader

of the 5 G Race . Will it Matters ?

This book answers an important question: if mentoring research coming out of Western nations have consistently shown that mentoring millennials brings tangible benefits to the organisation in the areas of job satisfaction, organisational commitment and employee retention, would such observations be seen in an Asian context?

Environmental Noise and Management Selma Kurra, Istanbul Technical University and dBKES Engineering Ltd, Turkey A comprehensive overview of environmental noise pollution from the standpoint of environmental impact and control Environmental noise is studied, regulated and monitored by many governments and institutions, as well as forming the basis for a number of different occupations due to the adverse effects of noise exposure. Environmental Noise and Management provides a comprehensive overview of environmental noise pollution. The book begins by covering the fundamentals of noise and acoustics, major noise sources and prediction and evaluation techniques. Developments in noise measuring techniques, and mapping and improvement of legislation to control noise pollution

are then discussed, and international regulations are presented. Technological advances and recent developments regarding strategy and action plans are also covered in depth. Key features: Summarizes the relevant international standards covering noise pollution and environmental engineering practice. Presents technological advances and recent developments regarding strategy and action plans. Covers developments in noise measuring techniques, prediction models, mapping and improvement of legislation to control noise pollution. Environmental Noise and Management is a comprehensive resource for researchers and graduate students who are involved in noise pollution from the standpoint of environmental impact and control.
