Exploring Inclusive Educational Practices Through Professional Inquiry

Assessment as Learning

Mathematics Makes Sense Eight

Studies of teachers in the U.S. often document insufficient subject matter knowledge in mathematics. Yet, these studies give few examples of the knowledge teachers need to support teaching, particularly the kind of teaching demanded by recent reforms in mathematics education. Knowing and Teaching Elementary Mathematics describes the nature and development of the knowledge that elementary teachers need to become accomplished mathematics teachers, and suggests why such knowledge seems more common in China than in the United States, despite the fact that Chinese teachers have less formal education than their U.S. counterparts. The anniversary edition of this bestselling volume includes the original studies that compare U.S and Chinese elementary school teachers' mathematical understanding and offers a powerful framework for grasping the mathematical content necessary to understand and develop the thinking of school children. Highlighting notable changes in the field and the author's work, this new edition includes an updated preface, introduction, and key journal articles that frame and contextualize this seminal work.

What's Wrong with Our Schools

Math Makes Sense

Leading thinkers in mathematics, philosophy and education offer new insights into the fundamental question: what is a mathematical concept?

Math Makes Sense 3

Pearson School eText is an easy-to-use database of content available to you anytime and anywhere that you have internet access. Students and teachers log in using unique information to access all of their content.

McGraw-Hill My Math develops conceptual understanding, computational proficiency, and mathematical literacy. Students will learn, practice, and apply mathematics toward becoming college and career ready.

Principles and Standards for School Mathematics

What's Wrong with Our Schools and How We Can Fix Them examines the status of public education in North America and exposes many of the absurd instructional practices found in all-too-many schools. Written by three experienced educators, this book provides readers with a direct window into public education. The language is straightforward, the case studies based on real events, and the research evidence clearly presented. With chapter titles like, 'Subject Matter Matters,' 'A Pass Should be Earned,' and 'There is Too Much Edu-Babble,' the authors

systematically demolish the ridiculous fads that have taken hold of public education. As unashamed apologists for the importance of knowledge and content in school curricula, the authors clearly show why the views of romantic progressives, like those of popular author Alfie Kohn, fail to stand up to rigorous scrutiny. A consistent focus on common sense permeates this book and provides parents, teachers, and administrators with practical ways in which they can help improve public education. Anyone interested in the future of public education will benefit from reading this book. For more information, visit www.fixingourschools.com.

Teaching Math with Meaning

Practitioners, scholars, and teacher education students alike can celebrate reading *Exploring Inclusive Educational Practices through Professional Inquiry*. This rich array of case scenarios both illuminates and elaborates the meaning of inclusion in today's schools and tomorrow's visions. Twenty-five stories from parents, teachers, school principals, and specialists highlight the kind of experiential

knowledge that won't be found in typical research reports and district documents about inclusive education. What happens to real people—students and their families—doesn't always resemble policies that can look so good on paper. This book makes a wonderful contribution to better understandings of the challenges of inclusion as well as the commitments positioned alongside values in order to meet those challenges. There are brave and spirited people in these pages—not the least of whom are the children themselves.

Professor Luanna H. Meyer, PhD
Director, Jessie Hetherington Centre for Educational Research
Victoria University, New Zealand

This is a book on inclusive education that leaves you with hope and ideas for action. It takes a very difficult and highly charged topic and demonstrates that it is possible to see both the trees and the forest.

Michael Fullan
Professor Emeritus OISE/University of Toronto

We are reminded in the commentaries parents share in this book of how their passionate commitment to good education and their ideas make inclusion work. The case-study approach reveals the critical importance of their, and many other perspectives in finding solutions to what are so often dismissed as irresolvable dilemmas. They aren't, and this book models exactly the kinds of conversations we need in schools across the country to challenge all of us to stay the course. It's a must-read for anyone who wants to make diversity and inclusion a reality in public education today.

Michael Bach
Executive Vice-President
Canadian Association for Community Living

Math Makes Sense 4 and 5

Maths Makes Sense is a new way of teaching maths that transforms children's understanding and enthusiasm for maths. The learning system combines a rigorous and systematic use of concrete objects, shared language and physical actions to make maths truly understandable from the start. Maths Makes Sense combines this learning system with partner work at the heart of flexible and effective teaching strategies. Together with inspiring whole school teacher training, you will be amazed how this system leads to a radical transformation in maths learning and engagement. This Easy Buy Pupil Kit contains 30 copies of each of the Progress Books 5A, 5B and 5C.

Heinemann Active Maths Northern Ireland: Engages pupils with a bank of stimulating, varied and exciting interactive and print-based activities. Follows an active approach to maths teaching and learning with an emphasis on real-life situations Helps children develop a concrete understanding of maths concepts through investigation and discussion

Math Makes Sense 6

This easy-to-read summary is an excellent tool for introducing others to the messages contained in Principles and Standards.

Math Makes Sense 9

For decades teachers and parents have accepted the judgment that some students just aren't good at math. John Mighton-the founder of a revolutionary math program designed to help failing math students-feels that not only is this wrong, but that it has become a self-fulfilling prophecy. A pioneering educator, Mighton realized several years ago that children were failing math because they had come to believe they were not good at it. Once students lost confidence in their math skills and fell behind, it was very difficult for them to catch up, particularly in the classroom. He knew this from experience, because he had once failed math himself. Using the premise that anyone can learn math and anyone can teach it, Mighton's unique teaching method isolates and

describes concepts so clearly that students of all skill levels can understand them. Rather than fearing failure, students learn from and build on their own successes and gain the confidence and self-esteem they need to be inspired to learn. Mighton's methods, set forth in *The Myth of Ability* and implemented in hundreds of Canadian schools, have had astonishing results: Not only have they helped children overcome their fear of math, but the resulting confidence has led to improved reading and motor skills as well. *The Myth of Ability* will transform the way teachers and parents look at the teaching of mathematics and, by extension, the entire process of education.

Pearson Science

This document is intended to inform discussion among Manitoba educators regarding the effective use of assessment processes to facilitate learning for all students.

Addison Wesley Math Makes Sense 8

Using clear explanations and cases, this must-have resource shows how formative assessment can improve student learning. Included are lesson plans and ideas for easy implementation.

Exploring Number

Driven by, and designed for, the 2005 Ontario Grade 9 Applied Math Curriculum, this program offers strategies for success for all learners.
