Idyls of the Year

Although a number of edited collections deal with either the languages of the world or the languages of particular regions or genetic families, only a few cover sign languages or even include a substantial amount of information on them. This handbook provides information on some 38 sign languages, including basic facts about each of the languages, structural aspects, history and culture of the Deaf communities, and history of research. This information will be of interest not just to general audiences, including those who are deaf, but also to linguists and students of linguistics. By providing information on sign languages in a manner accessible to a less specialist audience, this volume fills an important gap in the literature.

The SPIN Selling Fieldbook: Practical Tools, Methods, Exercises and Resources

Part travelogue, part memoir, The Yogurt Man Cometh is the story of Kevin Revolinski's year-long adventure as an English teacher in Turkey. Revolinski relates in candid style his encounters in a foreign culture, all told with an open mind and a sense of humor. An enjoyable read for anyone who has spent time in Turkey or who plans to do so.

The Quest for the Cure

An innovative and imaginative solution-based guide to common problems faced by all painters. As a painter, your two main

objectives are to draw the viewer to your work and to sustain their attention long enough to create a meaningful viewing experience. The success of both of these goals revolves around the quality of visual choreography inherent in your art. This solution-based guide offers ways to identify and overcome the common problems faced by all painters in every medium. To create the perfect painting, analysis and editing are critical. Create Perfect Paintings shows how to push your work to the next level by strengthening your perception, technical skill and visual thinking. Exercises and examples show how to critique your own creations and then evaluate them step by step for further improvement. You will compare illustrations and learn to identify and modify artistic choices--from negative space and color ratio to controlling eye movement, depth and contrast--to see their impact and help you use them to the best effect in your work. * Section 1: Essentials--Reviews and defines artistic terms and concepts. * Section 2: Play Phase--Shows you how to tap into your right brain. Learn to challenge the process and break habits to free your spirit and inspire variety in your art; also covers materials, tools and surfaces. * Section 3: Critique Phase--Introduces a groundbreaking method of contemporary critique called The Viewing Game a comprehensive, systematic and fun way to analyze, edit and enhance your paintings. * Sections 4 and 5--Bonus sections explore how to resolve creative blocks, convey artistic messages, boost your personal style, display your work and turn painting into a career. SELLING POINTS: * Top-selling author of three successful North Light technique books. * Author is an established and top selling artist and an expert at offering prolific solutions to common painting problems regardless of medium (oil, acrylic, drawing, watercolor). * Includes tips for self-critiquing work to strengthen one's unique style. * Addresses the two most common issues: Now what? and Is it finished? "May this book increase your productivity, add ease and flow to your creative process, clarify your ideas, add nuance to your personal style, and most importantly, add joy to the miraculous act of painting." --Nancy Reyner

A History of the Global Economy

CONTRIBUTIONS TO THE SOCIOLOGY OF LANGUAGE brings to students, researchers and practitioners in all of the social and language-related sciences carefully selected book-length publications dealing with sociolinguistic theory, methods, findings and applications. It approaches the study of language in society in its broadest sense, as a truly international and interdisciplinary field in which various approaches, theoretical and empirical, supplement and complement each other. The series invites the attention of linguists, language teachers of all interests, sociologists, political scientists, anthropologists, historians etc. to the development of the sociology of language.

Classic-Ultra & Annivers

The Yogurt Man Cometh

A leading researcher in chemical biology offers a behind-the-scenes tour of today's medical innovations, tracing key 20th-century pharmacological milestones while profiling sophisticated, emerging approaches to drug design that may enable breakthrough treatments for seemingly incurable diseases.

The Turing Omnibus

This book provides an in-depth study of coalition government experiments in India, with particular reference to the coalition politics at the Centre as well as in the states of Kerala and West Bengal.

Wars of the Age of Louis XIV, 1650-1715: An Encyclopedia of Global Warfare and Civilization

Put into practice today's winning strategy for achieving success in high-end sales! The SPIN Selling Fieldbook is your guide to the method that has revolutionized big-ticket sales in the United States and globally. It's the method being used by one-half of all Fortune 500 companies to train their sales forces, and here's the interactive, hands-on field book that provides the practical tools you need to put this revolutionary method into action immediately. The SPIN Selling Fieldbook includes: Individual diagnostic exercises Illustrative case studies from leading companies Practical planning suggestions Provocative questionnaires Practice sessions to prepare you for dealing with challenging selling situations Written by the pioneering author of the original bestseller, SPIN Selling, this book is aimed at making implementation easy for companies that have not yet established SPIN techniques. It will also enable companies that are already using the method to reinforce SPIN methods in the field and in coaching sessions.

Games, Strategies and Decision Making

Great Ideas in the History of Surgery

Harley-Davidson FLH/FLT/FXR Evolution 1984-1998

An introductory engineering textbook by an award-winning MIT professor that covers the history of dynamics and the dynamical analyses of mechanical, electrical, and electromechanical systems. This introductory textbook offers a distinctive blend of the modern and the historical, seeking to encourage an appreciation for the history of dynamics while also presenting a framework for future learning. The text presents engineering mechanics as a unified field, emphasizing dynamics but integrating topics from other disciplines, including design and the humanities. The book begins with a history of mechanics, suitable for an undergraduate overview. Subsequent chapters cover such topics as three-dimensional kinematics; the direct approach, also known as vectorial mechanics or the momentum approach; the indirect approach, also called lagrangian dynamics or variational dynamics; an expansion of the momentum and lagrangian formulations to extended bodies; lumped-parameter electrical and electromagnetic devices; and equations of motion for one-dimensional continuum models. The book is noteworthy in covering both lagrangian dynamics and vibration analysis. The principles covered are relatively few and easy to articulate; the examples are rich and broad. Summary tables, often in the form of flowcharts, appear throughout. End-of-chapter problems begin at an elementary level and become increasingly difficult. Appendixes provide theoretical and mathematical support for the main text.

Create Perfect Paintings

What makes Piyush Pandey an extraordinary advertising man, friend, partner and leader of men? How does he manage to exude childlike enthusiasm, and bring such deep commitment to his work? You've seen most of the things that Piyush Pandey has seen in his life. You've seen cobblers, carpenters, cricketers, trains, villages, towns and cities. What makes Piyush different is the perspective from which he views the same things you've seen, his ability to store all that he sees into some recesses of his brain and then retrieve them at short notice when he needs to. That ability combined with his love, passion and understanding of advertising and of consumers make him the master storyteller that he is. In *Pandeymonium*, Piyush talks about his influences, right from his childhood in Jaipur and being a Ranji cricketer, to his philosophy, failures and lessons in advertising in particular and life in general. Lucid, inspiring and unputdownable, this memoir gives you an inside peek into the mind and creative genius of the man who defines advertising in India.

The Image of Georgian Bath, 1700-2000

A chronology of Slovak history from the earliest times through the end of 2000.

Pandeymonium

"In co-operation with the International Economic History Association."

Slovak History

This authoritative and accessible book charts the history of Japan from c.8000 bc to the 1990s.

Learning to Love Yourself

Production chemistry issues result from changes in well stream fluids, both liquid and gaseous, during processing. Since crude oil production is characterized by variable production rates and unpredictable changes to the nature of the produced fluids, it is essential for production chemists to have a range of chemical additives available for rectifying issues that would not otherwise be fully resolved. Modern production methods, the need to upgrade crude oils of variable quality, and environmental constraints demand chemical solutions. Thus, oilfield production chemicals are necessary to overcome or minimize the effects of the production chemistry problems. *Production Chemicals for the Oil and Gas Industry, Second Edition* discusses a wide variety of production chemicals used by the oil and gas industry for down-hole and topside applications both onshore and offshore. Incorporating the large amount of research and applications since the first edition, this new edition reviews all past and present classes of production chemicals, providing numerous difficult-to-obtain references, especially SPE papers and patents. Unlike other texts that focus on how products perform in the field, this book focuses on the specific structures of chemicals that are known to deliver the required or desired performance—information that is very useful for research and development. Each updated chapter begins by introducing a problem, such as scale or corrosion, for which there is a production chemical. The author then briefly discusses all chemical and nonchemical methods to treat the problem and provides in-depth descriptions of the structural classes of relevant production chemicals. He also mentions, when available, the environmental properties of chemicals and whether the chemical or technique has been successfully used in the field. This edition includes two new chapters and nearly 50 percent more references.

International Law Reports

Scott Foresman Reading Street (c) 2011 is an all-new comprehensive Reading and Language Arts series for the 21st Century. Reading Street delivers classic and soon-to-be classic literature, scientifically research-based instruction, and a wealth of groundbreaking online experiences for high student engagement. My Teaching Library takes the guesswork out of Response to Intervention with a strong core emphasis on ongoing progress-monitoring and an explicit plan for managing small groups of students. The architecture of Understanding by Design accelerates all learners, especially English language learners, toward greater proficiency with a sustained Unit focus on concepts and language. Learn more.

Fundamentals of Applied Dynamics

Features over two hundred entries on people, places, and other topics related to the slave trade, contains alphabetical and topical lists of entries, and includes a timeline extending from the fifteenth through the late twentieth century.

Marketing: Theory, Evidence, Practice

In his international best seller, *The Situation Is Hopeless, But Not Serious*, Paul Watzlawick showed us how to become unhappiness experts. Now in a new volume he turns to our strivings for ultra-solutions--those final solutions that do away with the problem and just about everything else. (A perfect ultra-solution lies in that old medical joke: "The operation was successful, but the patient died.")As he begins this book, the author muses about the fate of Macbeth at the hands of the three witches. Their strategies led to his downfall, and--though much refined due to modern technology--are in force today. The urge for ultra-solutions has been with us since unrecorded time, and the witches are always there to offer sinister encouragement. Sure-fire candidates for ultra-solutions emerge in such chapters as "Twice as Much Is Not Necessarily Twice as Good," "Good Can Be Bad," "Nonzero-Sum Games," "Brave Digitalized World," and "I Know Exactly What You're Thinking." Other chapters point out the dangers of security and the nature of order/disorder. Fortunately, all can defend themselves against Hecate and her companions. While Dr. Watzlawick appears to be outlining all the ways we can "snatch failure from the jaws of success," he is, paradoxically, making us aware of the absurdity of our behavior.

Archaeology in Bath

The Invention of Religion

- Baltzan; M: Information Systems is a visual, magazine format designed to engage your students from the start! Saturated with fascinating, sometimes hard-to-believe real examples will keep them reading throughout the course. Baltzan's approach discusses various business initiatives first and how technology supports those initiatives second. The premise for this unique approach is that business initiatives drive technology choices in a corporation. Therefore, every discussion addresses the business needs first and addresses the technology that supports those needs second. This approach takes the difficult and often intangible MIS concepts, brings them down to the student's level, and applies them using a hands-on approach to reinforce the concepts. A derivative of the Baltzan; Business Driven Technology version, this M: Information Systems provides the foundation that will enable students to achieve excellence in business, whether they major in operations management, manufacturing, sales, marketing, etc. M: Information Systems is designed to give students the ability to understand how information technology can be a point of strength in an organization.

Molvania: A Land Untouched by Modern Dentistry

This is a reproduction of the original artefact. Generally these books are created from careful scans of the original. This allows us to preserve the book accurately and present it in the way the author intended. Since the original versions are generally quite old, there may occasionally be certain imperfections within these reproductions. We're happy to make these classics available again for future generations to enjoy!

Sign Languages of the World

Engineers need to make informed financial decisions when acting as a team member or as a project manager on an engineering project. Contemporary Engineering Economics: A Canadian Perspective, Third Canadian Edition, provides sound and comprehensive coverage of engineering economics concepts as well as a thorough basis of understanding for financial project analysis and does so by incorporating contemporary critical decision-making tools.

M

The funniest book about travel you will ever read: a travel guide to the fictional European republic 'Molvania', birthplace of the polka and whooping cough. The text and design draw on the standard travel guide format and include: background information on the destination, including cultural details, useful phrases, holidays, and calendar of events; accommodation and restaurant listings; activities and excursions; as well as text break-outs, colour photos and maps throughout.

Green Plastics

This is the first major textbook to offer a truly comprehensive review of cognitive science in its fullest sense. Ranging from artificial intelligence models of neural processes and cognitive psychology to recent discursive and cultural theories, Rom Harré offers an original yet accessible integration of the field. At its core, this textbook addresses the question 'How can psychology become a science?'. The answer is based on a clear account of method and explanation in the natural sciences and how they can be adapted to psychological research. Rom Harré has used his experience of both the natural and the human sciences to create a text on which exciting and insightful courses can be built in many ways. The text is based on the idea that underlying the long history of attempts to create a scientific psychology there are many unexamined presuppositions that must be brought to light. Whether describing language, categorization, memory, the brain or connectionism the book always links our intuitions about how we think, feel and act in the contexts of everyday life to the latest accounts of the neural tools with which we accomplish the cognitive tasks demanded of us. Computational and

biological models are used to link the discursive analysis of everyday cognition to the necessary activities of the brain and nervous system. Fluently written and well structured, this is an ideal text for students who want to gain a comprehensive view of the current state of the art with its seeming divergence into studies of meanings and studies of neurology. The book is divided into four basic modules, with suggestions for three lectures in each. The plan is related to the overall pattern of the semester programme. The reader is guided with helpful learning points, sections of study questions for review, and key readings for each chapter. Cognitive Science: A Philosophical Introduction, with its remarkable sweep of themes, past and present, truly introduces 'the science of the mind' for a new generation of psychology students. Cognitive Science should be indispensable reading for students at all levels taking courses in cognitive science and cognitive psychology, and useful additional course reading in other areas such as social psychology, artificial intelligence, philosophy of the mind and linguistics. Key Points · First major textbook to provide a link between computational, philosophical and biological models in an accessible format for students. Presents a new vision of psychology as a scientific discipline. · Breadth of coverage - ranging from artificial intelligence, to key themes & theories in cognitive science (past and present) - language, memory, the brain and behaviour - to recent discursive and cultural theories. · Plenty of student features to help the student and tutor including helpful learning points, study and essay questions and key readings at the end of every chapter.

Cognitive Science

Vector Basic Training

The biggest problem for outsiders in the world of economics is that most of the time, we don't know what the hell the insiders are talking about. To know that, you have to understand the words they're using. This book explains everything from high-frequency trading to the difference between bullshit and nonsense.

French Administrative Law

Marketing: Theory, Evidence, Practice bridges academic theory and real-world marketing knowledge. It introduces students to the core topics necessary for their undergraduate studies and is designed with the future professional in mind. It clearly illustrates how marketing problems have been solved in business - connecting theory to practice. Written by a combination of marketing academics and marketing scientists who engage with industry it presents information that is practical and interesting in a style that is theoretical and accessible.

READING STREET 5.2

A Gripping New Adventure by the Author of the Bestselling Crimson Worlds and Far Stars series
The Confederation has fought three wars against the forces of the totalitarian Union. Three generations of its warriors have gone off to war, held the line against the larger, more powerful enemy. Now the fourth conflict is imminent, and the Confederation's navy is on alert, positioned behind the frontier, waiting for the attack it knows is coming. The battleship Dauntless has spent the past ten months patrolling the border, deployed far forward of the main fleet, a forlorn hope, an advance guard positioned to give the warning of invasion. But no attack has come. Her crew is exhausted, and the aging battleship needs maintenance. With the fleet mobilized and the forward bases overloaded beyond capacity, she is sent clear across the Confederation, to a planet along the quiet and peaceful far frontier. Her crew is looking forward to a rest, and Dauntless herself is scheduled for a long-overdue maintenance session. But the quiet frontier isn't what it seems and when a distress call is received from one of the mining colonies on the edge of Confederation space, it falls to Captain Tyler Barron to take Dauntless forward, to find out what is happening, and to put a stop to it. Barron and his crew have their ship and each other but they can expect no other help. Suspicion is strong that Union deceit is at play, that the attack is some sort of diversion, intended to draw Confederation forces from the disputed border. The orders are clear. No ships will be transferred from the prospective battle line. Stopping whatever is happening on the rim is Barron's responsibility, and his alone. Barron is the grandson of the Confederation's great hero, the father of the modern navy. His family name has always carried privilege with it, and crushing responsibility. And now he must prove that he has inherited more from his famous grandfather than name and privilege. He must face the enemy, and win the victory before the Confederation is caught between two enemies and destroyed.

Blood on the Stars Reading Order
Book 1: Duel in the Dark
Book 2: Call to Arms (January 2017, Available now for preorder)

Coalition Politics

This interdisciplinary study explores the evolution, structure, and uses of the image of Georgian Bath, from its genesis in the eighteenth century to its renaissance in the twentieth century. In recent decades there has been both a popular resurgence of interest in heritage and tradition, and a growing academic awareness of the power of imagery in shaping the lives of individuals and societies. There is perhaps no city in Britain so saturated in history and layered with historic imagery as Bath. It therefore provides an ideal case-study to investigate the dynamic fusion and impact of the forces of past and representation. The dominant perception of Bath today is that of a classical and particularly Georgian city. In this stimulating and scholarly study, Peter Borsay examines the construction and development of this image. Its principal components, biography and architecture, are explored, together with the media through which it was constructed and transmitted, as well as its commercial, social, political, and psychological uses. Dr Borsay concludes by relating the findings for Bath to current debates on towns, heritage, and the nature of history.

As a Woman Thinketh

Duel in the Dark

Contemporary Engineering Economics

This book on game theory introduces and develops the key concepts with a minimum of mathematics. Students are presented with empirical evidence, anecdotes and strategic situations to help them apply theory and gain a genuine insight into human behaviour. The book provides a diverse collection of examples and scenarios from history, literature, sports, crime, theology, war, biology, and everyday life. These examples come with rich context that adds real-world meat to the skeleton of theory. Each chapter begins with a specific strategic situation and is followed with a systematic treatment that gradually builds understanding of the concept.

A History of Japan

Dominated by the ambitions of France's King Louis XIV, Europe in the years 1650-1715 witnessed a series of wars from which emerged many of the theories, practices, and technologies that characterize modern warfare. During this period, European armies evolved modern ideas of army organization and military leadership, as well as modern views of campaign strategy and battle tactics. As European soldiers and colonists moved into Asia, the Middle East, and the Americas, the practice or influence of their military techniques and ideas also affected wars fought in those places. In this volume's 1000 plus entries, an award-winning author of reference works on international relations and war describes and defines important events, technologies, and individuals from this seminal period of global military history.

Encyclopedia of the Middle Passage

"In this book, the author explores the question of whether religions were invented by humans or given to us by some other means. It is a scientific look at how ancient humans made sense of the world and the phenomena they encountered around them. In the past, arguments against the existence of gods have mainly come in the form of scientific inquiries that attempt to show there is no evidence for their existence. The Invention of Religion, however, investigates the psychological mechanisms that cause religions to originate and it sets out to prove that when humans have neither science nor religion, these mechanisms cause them to invent new religions. It also investigates how the differences (like monotheism vs.

pantheism) between religions arise and how probable these differences are"--Amazon.com.

How to Speak Money

Production Chemicals for the Oil and Gas Industry, Second Edition

This enhanced e-book combines video and text to create a learning experience that is engaging, informative and fun. In addition to the full text of Vector Basic Training, you'll find high-quality video training that brings the topics to life through friendly visual instruction from experts and industry professionals. Listen up, designers, and wipe those grins off your faces! It's time to get serious about your design work. For too long you've allowed yourself to slack off, relying on your software to do all of your creative work for you. This book will NOT show you how to use every tool and feature in Adobe Illustrator. This book WILL, however, teach you the importance of drawing out your ideas, analyzing the shapes, and then methodically building them precisely in vector form using the techniques explained in this book. In Vector Basic Training, acclaimed illustrative designer Von Glitschka takes you through his systematic process for creating the kind of precise vector graphics that separate the pros from the mere toolers. Along the way, he'll whip your drawing skills into shape and show you how to create elegant curves and precise anchor points for your designs. The book and accompanying video tutorials will get you ready for active creative duty in zero hundred hours or less. In Vector Basic Training, you'll learn:

- The tools, plugins, and shortcuts that make up a design pro's creative armament
- How to use "The Clockwork Method" to create accurate curves every time
- When and where to set just the right number of anchor points for any design
- How to build shapes quickly using familiar Illustrator tools
- Techniques for art directing yourself so that your work gets the response you desire
- Why symmetry is your friend and how to use it effectively in your designs

Von Glitschka reports for duty in over 4 hours' worth of video tutorials that walk you through all the techniques explained in the book. Art files you can use to follow along with the book's samples are downloadable separately (see last page of your eBook for download instructions).

Crosswords

Plastics are everywhere. Bags, bank cards, bottles, and even boats can all be made of this celebrated but much-maligned material. Yet most of us know next to nothing about plastics. We do know that they are practical and cheap--but they also represent a huge environmental problem, for they literally take ages to decompose. In this engaging book, E.S. Stevens tells us everything we have always wondered about plastics and of the efforts, in America, Europe, and Asia, to develop a new breed of environmentally friendly plastics. He points to a possible future where plastics will no longer be made of petroleum, but of plants. The first two chapters assess the increased use of plastics as a relatively new alternative to other

materials. The third chapter introduces us to their impact on the environment and strategies for their disposal or recycling. The next two chapters cover basic concepts and terms used in polymer sciences and provide some basic chemistry. With these fundamentals in tow, the author compares how petroleum-based and biological polymers are made, and the various ways in which they decompose. He acquaints readers with the emerging technologies, their commercial viability, and their future. Finally, instructions are given for preparing basic bioplastics using readily available materials. Nonspecialists will find *Green Plastics* a concise introduction to this exciting interdisciplinary topic--an introduction otherwise not available. For students it provides easy entry to an area of science with wide appeal and current importance; for teachers, excellent background reading for courses in various sciences. The prospect of depleted fossil fuel supplies, and the potential benefits of bioplastics to the environment and to rural areas that could supply the raw materials, make this book a compelling presentation of a subject whose time has come.

Annual Report to the Legislature

Ultra-Solutions

A round-up of excavations undertaken by Bath Archaeological Trust between 1984 and 1989. These consist mainly of the excavation of the Roman and medieval town centre of Bath Street and Beau Street and at the Cross Bath, and of a Roman site at Julian Road.
