Scientific, Medical

To spite a national trend toward renovation, restoration, and remodeling, construction products producers and their associations are not universally eager to publish recommendations for repairing or extending existing materials. There are two major reasons. First, there are several possible applications of most building materials; and there is an even larger number of different problems that can occur after products are installed in a building. Thus, it is difficult to produce recommendations that cover every eventuality. Second, it is not always in a building construction product producer's best interest to publish data that will help building owners repair their product. Producers, whose income derives from selling new products, do not necessarily applaud when their associations spend their money telling architects and building owners how to avoid buying their products. Finally, in the Building Renovation and Restoration Series we have a reference that recognizes that problems frequently occur with materials used in building projects. In this book and in the other books in this series, xiii xlv Series Foreword Simmons goes beyond the promotional hyperbole found in most product literature and explains how to identify common problems. He then offers informed "inside" recommendations on how to deal with each of the problems. Each chapter covers certain materials, or family of materials, in a way that can be understood by building owners and managers, as well as construction and design professionals.

The Outlook

Volume IV of The Historical Harpsichord contains two monographs of major importance, Harpsichord Decoration: A Conspectus by Sheridan Germann, and A Fable Deconstructed: The 1770 Taskin at Yale by Richard Reppann. Sheridan Germann, an acclaimed scholar and practitioner in the field of harpsichord decoration, offers the first comprehensive illustrated conspectus of the subject. In Part I Ms. Germann tells us that the styles of the decoration of harpsichords (and spinets, virginals and clavichords) tended to follow contemporary furniture fashions, but usually lagged conservatively behind the prevailing fashions. Because, unlike most furniture, the instruments are often dated, they provide rare documentation of how long these styles remained in common use. This survey follows chronologically the five major regional traditions of keyboard instrument decoration-Italian, Flemish, French, German and English-but with emphasis on

the international changes in taste on which each region produced its own variations. In Part II, Richard Rephann of the Yale Musical Instrument Collection describes his research into the uniquely experimental construction of the 1770 Pascal Taskin harpsichord. This essay forms a pendant to William Dowd's in Vol. I that treats the surviving instruments of the Blanchet-Taskin workshop up to 1770. The romantic provenance of the 1770 Taskin, concocted by the antique trade to enhance the instrument's market value, is revealed as a fable.

Sales and Use Tax Answer Book (2009)

The Sales and Use Tax Answer Book is the key reference source for which practitioners have been searching. Not only is it

comprehensive and clear; it also provides extensive citation to important case and statutory law. Forty-five states and the District of Columbia impose a sales tax on the retail sale of tangible personal property and selected services. In addition, there are 7,500 cities, municipalities, towns, school districts, counties, and other special taxing districts that levy sales and use taxes. The varying rates, the changing jurisdictional boundaries, the different tax bases, and the often inconsistent and contradictory interpretations of similarly worded statutes are all covered. The book also includes a chapter on sales tax reforms, particularly the Streamlined Sales Tax Project.
