Timothy Richard's Vision

Pioneer missionary Timothy Richard served forty-five years in China and became a household name among educated Chinese. Largely forgotten for decades, his amazing life is reintroduced in this most welcome volume. In 1880, Richard first articulated a vision for modern higher education as the basis for overall progress in China. His influence grew, along with high official honors, after 1891 when he became general secretary of the Christian Literature Society and continued as a leader in the Educational Association of China. By the mid-1890s, many Chinese scholars and officials began to embrace his expanding vision and approach to reform. After the 1900 Boxer Uprising, Richard was invited by the Chinese government to represent Protestant missions, advising and mediating the settlement for the losses of life and property, especially heavy in Shanxi. Following his recommendation, which received Imperial approval by June 1901, the province paid a fine, but it was used to found a college of Western learning in its capital city. The Imperial University of Shansi (now Shanxi University), with Chinese and Western Learning Departments, and overseen by Richard and the provincial governor as joint chancellors, was to serve as the model institution in a national system of modern higher education.

The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is part of everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce an adult's risk of chronic health conditions, death, falls and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social development, academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily life to the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and various injury prevention behaviors. A larger population health approach is needed to engage a wide range of

stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to new social norms that promote eye and vision health. Making Eye Health a Population Health Imperative: Vision for Tomorrow proposes a new population-centered framework to guide action and coordination among various, and sometimes competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific examples of how population health strategies can be translated into cohesive areas for action at federal, state, and local levels.

CBSE always believes in Global Trends of Educational Transformation and Continual Improvement Process which means that the Board continually examines its processes and curriculum to evolve and find resonance amongst the educational fraternity. In this context, CBSE had restored Class X Board examination from the academic year 2017-18 doing away with the CCE pattern. Further to this, on 29th March 2018, CBSE released an updated curriculum for Academic Year 2019-2020 on which this latest edition of Oswaal Unsolved Papers is based. We at Oswaal Books are always proactive to follow the changes proposed by the Board and implement the same as soon as possible to put the students, parents and teachers at ease. The Oswaal Unsolved Papers have been modified and rewritten as per the latest Board guidelines in order to supplement the need of the students during the entire academic year! As the CBSE remodelled assessment

structure is divided in two major parts namely Internal Assessment and Board Examinations, Oswaal Unsolved Papers have been designed to assist students to prepare for their multiple Assessment as well as the Board examinations with equal ease. Oswaal Unsolved Papers will not only help students with regular studies but will also equip the teachers with the most updated study material for the class. The unsolved questions provide ample scope for practice leading to better understanding of concepts. The solutions to all the unsolved questions can found in Oswaal Question Banks for the specific subjects. The Unsolved Papers have been designed with a lot of care and attention to details. All chapters are arranged 'TOPICWISE' where each topic is explained in detail and covers all typologies of Questions specified by CBSE. We hope to make Oswaal Unsolved Papers a student's best companion to sail through the entire academic year smoothly. Some of the key highlights of Oswaal Unsolved Papers are:

- Strictly based on the latest CBSE Curriculum issued on 29th March 2019 for Academic Year 2019-2020
- Previous Years' Board Unsolved Questions have been given for practice
- Handwritten Toppers' Answers and all Typology of Questions including Objective Type have been given for each chapter.
- 'Most likely Questions' generated by Oswaal Editorial Board with 100+ years of teaching experience.
- Suggested videos at the end of Chapters are given for a Hybrid Learning Experience.

Process Oriented Guided Inquiry Learning (POGIL) is a pedagogy that is based on research on how people learn and has been shown to lead to better student outcomes in many contexts and in a variety of academic disciplines. Beyond facilitating students' mastery of a discipline, it promotes vital educational outcomes such as communication skills and critical thinking. Its active international community of practitioners provides accessible educational development and support for anyone developing related courses. Having started as a process developed by a group of chemistry professors focused on helping their students better grasp the concepts of general chemistry, The POGIL Project has grown into a dynamic organization of committed instructors who help each other transform classrooms and improve student success, develop curricular materials to assist this process, conduct research expanding what is known about learning and teaching, and provide professional development and collegiality from elementary teachers to college professors. As a pedagogy it has been shown to be effective in a variety of content areas and at different educational levels. This is an introduction to the process and the community. Every POGIL classroom is different and is a reflection of the uniqueness of the particular context – the institution, department, physical space, student body, and instructor – but follows a common structure in which students work cooperatively in self-managed small groups of three or four. The group work is focused on activities that are carefully designed and scaffolded to enable students to develop important concepts or to deepen and refine their understanding of those ideas or concepts for themselves, based entirely on data provided in class, not on prior reading of the textbook or other introduction to the

topic. The learning environment is structured to support the development of process skills -- such as teamwork, effective communication, information processing, problem solving, and critical thinking. The instructor's role is to facilitate the development of student concepts and process skills, not to simply deliver content to the students. The first part of this book introduces the theoretical and philosophical foundations of POGIL pedagogy and summarizes the literature demonstrating its efficacy. The second part of the book focusses on implementing POGIL, covering the formation and effective management of student teams, offering guidance on the selection and writing of POGIL activities, as well as on facilitation, teaching large classes, and assessment. The book concludes with examples of implementation in STEM and non-STEM disciplines as well as guidance on how to get started. Appendices provide additional resources and information about The POGIL Project.

The original charter of the Space Science Board was established in June 1958, 3 months before the National Aeronautics and Space Administration (NASA) opened its doors. The Space Science Board and its successor, the Space Studies Board (SSB), have provided expert external and independent scientific and programmatic advice to NASA on a continuous basis from NASA's inception until the present. The SSB has also provided such advice to other executive branch agencies, including the National Oceanic and Atmospheric Administration (NOAA), the National Science Foundation (NSF), the U.S. Geological Survey (USGS), the Department of Defense, as well as to Congress. Space Studies Board Annual Report 2014 covers a message from the chair of the SSB, David N. Spergel. This report also explains the origins of the Space Science Board, how the Space Studies Board functions today, the SSB's collaboration with other National Research Council units, assures the quality of the SSB reports, acknowledges the audience and sponsors, and expresses the necessity to enhance the outreach and improve dissemination of SSB reports. This report will be relevant to a full range of government audiences in civilian space research - including NASA, NSF, NOAA, USGS, and the Department of Energy, as well members of the SSB, policy makers, and researchers.

The Saturday Review of Politics, Literature, Science and Art

This groundbreaking book weaves together three important themes. It describes major developments in the diagnosis and treatment of heart disease in the twentieth century, explains how the Mayo Clinic evolved from a family practice in Minnesota into one of the world's leading medical centers, and reveals how the invention of new technologies and procedures promoted specialization among physicians and surgeons. *Caring for the Heart* is written for general readers as well as health care professionals, historians, and policy analysts. Unlike traditional institutional or disease-focused histories, this book places individuals and events in national and international contexts that emphasize the interplay of medical, scientific, technological, social, political, and economic forces that have resulted in contemporary heart care. Patient stories and media perspectives are included throughout to help general readers understand the medical and technological developments that are described. The book is a synthetic study, but it is written so that readers may pick and choose the chapters of most interest to them. Another feature of the book is that readers may follow the stories without looking at the notes. Those who are interested in delving deeper into the main topics will find a wealth of carefully chosen references that offer greater detail and additional perspectives. The descriptions and interpretations that fill the book benefit from the fact that the author has been a practicing cardiologist and medical historian for almost four decades. This is mainly a twentieth-century story, but it begins earlier--before there were physicians who were identified as cardiologists and at a time when medical specialization was just emerging in America. The final chapter, which addresses present-day concerns about health care costs, counterbalances earlier ones that might be read as celebrations of new technologies.
