Creative Problem Solving for Managers

Mississippi River Tragedies

This is the first book to present a practical, problem-solving approach and hands-on tools and techniques for assessing English-language learners and culturally diverse students in K-12 settings. It meets a crucial need among practitioners and special educators working in today's schools. Provided are research-based, step-by-step procedures for conducting effective interviews with students, parents, and teachers; making the best use of interpreters; addressing special issues in the prereferral process; and conducting accurate, unbiased assessments of academic achievement, intellectual functioning, language proficiency, and acculturation. Among the book's special features are reproducible worksheets, questionnaires, and checklists--including several in both English and Spanish--in a ready-to-use, large-size format. This book is in The Guilford Practical Intervention in the Schools Series.

"At the heart of the Christian message is God Himself waiting for His redeemed children to push in to conscious awareness of His Presence." - A.W. Tozer David was a man after God's own heart. He slew Goliath, ruled Israel and wrote such inspiring scriptures as Psalm 139. Yet David had an affair with Bathsheba, breaking multiple commandments including having Bathsheba's husband murdered. How can we guard our walk and prevent catastrophic mistakes like those that David made? How can we lead a life that bears the fruit of an effective faith? God's Word realistically portrays authentic people of faith. Their true stories are preserved for us as teachable moments. Are we listening? Before God's Face takes a practical approach drawing from Biblical stories and modern parallels to help us draw near to God as we learn the simple spiritual discipline of coram Deo - living in God's presence. Blessed are those who have learned to acclaim you, who walk in the light of your presence, Lord. (Psalm 89:15)

Over 220,000 entries representing some 56,000 Library of Congress subject headings. Covers all disciplines of science and technology, e.g., engineering, agriculture, and domestic arts. Also contains at least 5000 titles published before 1876. Has many applications in libraries, information centers, and other organizations concerned with scientific and technological literature. Subject index contains main listing of entries. Each entry gives cataloging as prepared by the Library of Congress. Author/title indexes.

Design and Development of Knowledge Management for Manufacturing

This book examines the modules/elements required before implementing knowledge management solutions in typical manufacturing and service industry. The objective is to develop a framework, design and model suitable for all requirements and a strategy to properly implement. Related case studies from organizations are included, with the results provided to use as a solution to problems experienced when implementing knowledge management in the industry. Implementing a knowledge management system can be complex and dynamic, no matter how well planned and developed. Inevitably a degree of organizational inertia is focused on the current state rather than the new. Within

an enterprise, personal and group involvement and interests process status and technology landscape can deflect the commitment needed to successfully implement such a system. Cumulative evidence from past research in knowledge management suggests that effective implementation of KM solution in any organization requires a robust designs and models for various critical elements of process, people and technology. Using the techniques provided in this book, readers should be able to design knowledge management strategies, to align objectives of the KM initiatives with their business goals.

Experience the growth multiplier effect through transforming the distribution and sales network Selling Through Someone Else tackles new opportunities to drive company growth by taking a fresh look at the customer smart distribution and sales process. The authors, from Accenture, one of the world's largest consulting companies, explain how companies can be smarter about what their customers truly want and maximize the return on investment from all available resources for growth opportunities by exploring creative distribution options, including leveraging partners, online outlets, iPads/tablets, your traditional sales force, and more. Selling Through Someone Else demonstrates that traditional approaches are no longer effective and how, by capitalizing on converging forces, companies can transform their "sales" approaches to grow revenue, and enhance customer and brand loyalty. Explores how globalization, new competitors, and low-cost threats are reshaping the way sales is happening today, and how to prepare your company to be successful in this new dynamic and iterative selling model Shows how analytics, the shift to digital selling and mobile sales tools, and new approaches to sales operations can reshape the entire sales function Demonstrates how new ecosystems of partners are created, managed, and incented to drive greater sales and profitability Accenture has helped numerous clients collaborate across IT, Sales, and Marketing to dramatically grow distribution and adapt to the different "playing field" of today. Selling through Someone Else applies the trends and lessons learned from Fortune 500 and Global 500 companies to mid-sized enterprises and small-medium businesses owners.

The landmark book that has revolutionized the way we understand leadership and decision making -- from #1 bestselling author Malcolm Gladwell. In his breakthrough bestseller *The Tipping Point*, Malcolm Gladwell redefined how we understand the world around us. Now, in *Blink*, he revolutionizes the way we understand the world within. *Blink* is a book about how we think without thinking, about choices that seem to be made in an instant--in the blink of an eye--that actually aren't as simple as they seem. Why are some people brilliant decision makers, while others are consistently inept? Why do some people follow their instincts and win, while others end up stumbling into error? How do our brains really work--in the office, in the classroom, in the kitchen, and in the bedroom? And why are the best decisions often those that are impossible to explain to others? In *Blink* we meet the psychologist who has learned to predict whether a marriage will last, based on a few minutes of observing a couple; the tennis coach who knows when a player will double-fault before the racket even makes contact with the ball; the antiquities experts who recognize a fake at a glance. Here, too, are great failures of "blink": the election of Warren Harding; "New Coke"; and the shooting of Amadou Diallo by police. *Blink* reveals that great decision makers aren't those who process the most information or spend the most time deliberating, but those who have perfected the art of "thin-slicing"--filtering the very few factors that matter from an overwhelming number of variables.

There is a growing need to support undergraduate educators in the development of environmental management educational materials. Recognizing this need, the National Science Foundation funded a College Faculty Workshop on Environmental Management, that was conducted at Utah State University in July and August 1996. The principle objectives of the seminar were (1) to provide a meaningful course which would generate new ideas and innovative educational approaches in the emerging field of environmental management, and (2) to develop an applications-oriented problem workbook which would support undergraduate faculty involvement in the production of course materials. The result of this effort is Environmental Management: Problems and Solutions, an informative text on the essentials of environmental management. More than 200 structured problems presented in the book are meant to elicit a sound understanding of the basics of environmental monitoring, assessment and control. Detailed solutions to each problem, provided with each chapter, will prove useful to both the student and the instructor. This innovative text is a valuable resource for anyone involved in training of engineers and scientists in the field of environmental engineering.

The Tale Of The Pouty Goat is book number two of the Goatly Adventure Series. After our goat tries to eat his way into the county fair in the Tale Of The Gouty Goat, we see how he deals with disappointment in the Tale Of The Pouty Goat. He seeks out a barnyard friend to help him put life into perspective and ends up learning the meaning of "count your blessings".

Fluid Mechanics with Engineering Applications

You will never quite know how many opportunities you have missed by lacking a little self-confidence when you need it most. Whether it's nailing that job interview, speaking in front of a crowd, or asking that someone on a date. All too often people fall short in these moments as they aren't equipped with the cutting edge confidence to adequately deal with them. Not anymore James Daugherty is an intelligence expert & former CIA Spy who specializes in all forms of communication. But there's one thing that underpins everything, confidence. It's what keeps spy's alive. However, he never realized quite how much his intelligence tactics on building general confidence, prepping for specific assignments, or dealing with stressful situations on the fly would help everyday people in civilian life. Imagine how different your life could be if you were able to operate optimally in every situation. In this eye-opening & engaging book, Daugherty gives readers a firsthand look into the trials & tribulations he dealt with in the field as a CIA operative & no-nonsense guide revealing how to: Build general overriding confidence (that lasts). Step by step strategies to overcome limiting beliefs. Prepping for important 'missions' (interviews, meetings, dates) you have prior warning for. Positive visualization techniques Body language tips for making a

great first impression Breakdown & use of the OODA loop process to efficiently deal with stressful situations Spy tactics to deal with social anxiety on the fly. Confidence is a mixture of fascinating anecdotes combined with the scientific rationale to back up the author's advice. The clever confidence tricks described will help you in all areas of life from a professional career, relationships and ultimately your future success.

Read a free excerpt here! American engineers have done astounding things to bend the Mississippi River to their will: forcing one of its tributaries to flow uphill, transforming over a thousand miles of roiling currents into a placid staircase of water, and wresting the lower half of the river apart from its floodplain. American law has aided and abetted these feats. But despite our best efforts, so-called “natural disasters” continue to strike the Mississippi basin, as raging floodwaters decimate waterfront communities and abandoned towns literally crumble into the Gulf of Mexico. In some places, only the tombstones remain, leaning at odd angles as the underlying soil erodes away. Mississippi River Tragedies reveals that it is seductively deceptive—but horribly misleading—to call such catastrophes “natural.” Authors Christine A. Klein and Sandra B. Zellmer present a sympathetic account of the human dreams, pride, and foibles that got us to this point, weaving together engaging historical narratives and accessible law stories drawn from actual courtroom dramas. The authors deftly uncover the larger story of how the law reflects and even amplifies our ambivalent attitude toward nature—simultaneously revering wild rivers and places for what they are, while working feverishly to change them into something else. Despite their sobering revelations, the authors’ final message is one of hope. Although the acknowledgement of human responsibility for unnatural disasters can lead to blame, guilt, and liability, it can also prod us to confront the consequences of our actions, leading to a liberating sense of possibility and to the knowledge necessary to avoid future disasters.

William Nash Moore was born near Cote San Dessein in 1831 and lived all his life in the area. He was seventy-two years old in 1903 when Earle Hodges, editor of the Mokane Herald-Post, asked him to write down his memories of the people and places of South Callaway. His articles were published in every issue of the weekly newspaper for several months. More was writing from memory and may have never seen some of these names in print. He spelled names the way he thought they should be. He was a man with strong opinions and didn't hesitate[sic] to say what he thought of his neighbors. Readers may not always agree, but we can all be grateful for this rare record of early Callaway County.

This new edition adds several new chapters and is thoroughly updated to include data on new topics such as hydraulic fracturing, CO₂ sequestration, sustainable groundwater management, and more. Providing a complete treatment of the theory and practice of groundwater engineering, this new handbook also presents a current and detailed review of how to model the flow of water and the transport of contaminants both in the unsaturated and saturated zones, covers the protection of groundwater, and the remediation of contaminated groundwater.

This accessible text provides a lively introduction to the essential skills of creative problem solving. Using extensive case-studies and examples from a range of business situations, it explores various problem-solving theories and techniques, illustrating how these can be used to solve a range of management problems. Thoroughly revised and redesigned, this new edition retains the accessible and imaginative approach to problem-solving skills of the first edition. Contents include: * blocks to creativity and how to overcome them * key techniques including lateral thinking, morphological analysis and synectics * computer-assisted problem solving * increased coverage of group problem-solving techniques and paradigm shift. As creativity is increasingly recognized as a key skill for successful managers, this book will be welcomed as a comprehensive introduction for students and practising managers alike.

Hydraulics

The report comprises a review and analysis of the available literature pertaining to the causes, effects and prevention of secondary (delayed) ettringite in concrete .

Over 300 publications have been examined . Case studies of damage in concrete possibly caused by secondary ettringite formation are examined first. Fundamental research on secondary ettringite formation, its chemistry, and deposition mechanisms is then reviewed. Key investigations on the topic are analyzed in detail. Next, the potential importance of (a) method of heat-curing and (b) the chemistry of cement is outlined. In the final chapter, a rapid test for evaluation of potential secondary ettringite susceptibility (the "Duggan" test) is evaluated. The analysis indicates that there appears to be a potential for a secondary ettringite formation problem in North America; it is highly probable that secondary ettringite formation can lead to significant deterioration of heat-treated concrete. However, it is unlikely that secondary ettringite formation is, or will be, the sole mechanism responsible for premature deterioration. The critical factors that determine extent of damage due to secondary ettringite formation are (a) duration of delay period before heating the concrete; (b) severity of the heating and/or cooling regime ; and (c) the SO₃/A₁₂₀₃ ratio of the cement. There is no evidence that nonheat-treated concrete is susceptible to this phenomenon. Further research and improvements to the Duggan test may result in the development of a useful standard test method to assess the long-term dimensional stability and durability of concrete.
