Recommendations for International Action

The processes and procedures that are specified within the EU proposals to update data protection laws do not allow for flexibility or discretion for businesses or other organisations which hold personal data, or for data protection authorities. The proposals should focus on those elements that are required to achieve the Commission's objectives, whilst compliance should be entrusted to Member States' data protection authorities. These instruments would give EU citizens new data protection rights as set out in the Charter of Fundamental Rights of the European Union and the Lisbon Treaty. Despite its criticisms, the Committee welcomes the potential benefits that an updated law could bring. For individuals, their rights

would be strengthened, and in particular the new framework would guard against some of the more unwelcome and often criticised aspects of digital data processing. From a business perspective, the benefits would mainly accrue through the effective harmonisation of laws. Whilst the draft Regulation would cover general data protection, the draft Directive is specifically concerned with data protection for law enforcement purposes. The Committee been told that the draft Directive does not apply to domestic processing by law enforcement agencies within the UK. This needs to be placed beyond doubt. Additionally, it needs to be made clear that the Directive must not impact on the ability of the police to use common law powers to pass on information in the interests of crime prevention and public protection

Quality of Protection: Security Measurements and Metrics is an edited volume based on the Quality of Protection Workshop in Milano, Italy (September 2005). This volume discusses how security research can progress towards quality of protection in security comparable to quality of service in networking and software measurements, and metrics in empirical software engineering. Information security in the business setting has matured in the last few decades. Standards such as ISO17799, the Common Criteria (ISO15408), and a number of industry certifications and risk analysis methodologies have raised the bar for good security solutions from a business perspective. Designed for a professional audience composed of researchers and practitioners in industry, Quality of Protection: Security Measurements and Metrics is also suitable for advanced-level students in computer science.

book offers insight on translating the guiding light of OECD Privacy Guidelines, the Fair Information Practice Principles (FIPPs), Generally Accepted Privacy Principles (GAPP) and Privacy by Design (PbD) into concrete concepts that organizations, software/hardware engineers, and system administrators/owners can understand and apply throughout the product or process life cycle—regardless of development methodology—from inception to retirement, including data deletion and destruction. In addition to providing practical methods to applying privacy engineering methodologies, the authors detail how to prepare and organize an enterprise or organization to support and manage products, process, systems, and applications that require personal information. The authors also address how to think about and assign value to the personal information assets being protected. Finally, the team of experts offers thoughts about the information revolution that has only just begun, and how we can live in a world of sensors and trillions of data points without losing our ethics or value(s) and even have a little fun. The Privacy Engineer's Manifesto is designed to serve multiple stakeholders: Anyone who is involved in designing, developing, deploying and reviewing products, processes, applications, and systems that process personal information, including software/hardware engineers, technical program and product managers, support and sales engineers, system integrators, IT professionals, lawyers, and information privacy and security professionals. This volume offers an evaluation of the Schengen Information System and border control co-operation from a transparency and proportionality perspective. It also incorporates a legal descriptive analysis of the co-operation in order to accommodate the changes and developments that occurred during the writing period. The transparency and proportionality perspectives are developed from human rights and data protection criteria. Transparency is understood as knowledge and accessibility to legal information as well as openness and accountability. On the other hand, proportionality is a requirement for guidance,

balance and justification as well as a need to avoid excessiveness and arbitrariness in border control work. The final findings reveal that the Schengen co-operation suffers from a deficiency of transparency and proportionality. Consequently, measures are proposed to augment the deficiency. Even as this study was reaching its conclusion, fundamental legislative changes, closely similar to some of the arguments and recommendations projected in this study, took place. The efficacy of these changes is yet to be discerned.

With the European Union GDPR the Council of the European Union attempts to strengthen and unify data protection for all individuals within the European Union. Within the European Union regulations and standards regarding the protection of data are stringent. The GDPR came into effect in May 2016 and organizations had until May 2018 to change their policies and processes to ensure that they fully comply with the GDPR. Companies outside Europe also need to comply the GDPR when doing business in Europe. One of the solutions to comply on the GDPR is to train and qualify staff. This report examines the EU's response to international terrorism after the Madrid bombings in March 2004, including the European Council declaration and the European Commission's proposals on data exchange and intelligence sharing between law enforcement authorities; data protection issues; EU institutional structures designed to combat terrorism; the international dimension, including the role of Interpol, data transfer and passports; terrorist financing and access to financial databases. Conclusions reached by the Committee include that the EU's role in combating terrorism should remain a co-ordinating one in support of the Member States, which must retain primary responsibility, and the EU should engage with international agencies, particularly Interpol. Given the range of interests involved, effective co-ordination, and the work of the EU Counter-terrorism Co-ordinator, are crucial, and the present proliferation of EU groups and agencies needs to be reduced and streamlined. A uniform data protection regime within the EU would not only provide better data protection but would also facilitate the exchange of information.

Information and knowledge have become crucial factors in modern labour markets. In this context, labour-management relations are characterised by an increasing and considerable flow of information. These developments are influenced by new management techniques, such as human resources management, in which the individual is identified as a key element in business success. Furthermore, there is the globalisation of the economy, the increase of international corporate mergers and the unfolding of the network society, which goes hand in hand with technological innovations. These developments not only multiplied the needs for information and the flow of data in employment relations, but also improved

techniques of data processing revealing sensitive data of employees. This book deals with employment privacy law, a field of knowledge that increasingly gains influence in legal theory and daily practice. It concentrates on the legal regulation of general human resources data as well as sensitive data in the employment context. The book is developed within a comparative perspective, providing an overview and analysis of the Law of each Member State of the European Union in the field of study. It is completed by a comparative summary. Information and insights in this book will be of great value for practicing lawyers, human resources managers, academics, interest groups and policy makers. GDPR For Dummies

As data represent a key asset for today's organizations, the problem of how to protect this data from theft and misuse is at the forefront of these organizations' minds. Even though today several data security techniques are available to protect data and computing infrastructures, many such techniques -- such as firewalls and network security tools -- are unable to protect data from attacks posed by those working on an organization's "inside." These "insiders" usually have authorized access to relevant information systems, making it extremely challenging to block the misuse of information while still allowing them to do their jobs. This book discusses several techniques that can provide effective protection against attacks posed by people working on the inside of an organization. Chapter One introduces the notion of insider threat and reports some data about data breaches due to insider threats. Chapter Two covers authentication and access control techniques, and Chapter Three shows how these general security techniques can be extended and used in the context of protection from insider threats. Chapter Four addresses

anomaly detection techniques that are used to determine anomalies in data accesses by insiders. These anomalies are often indicative of potential insider data attacks and therefore play an important role in protection from these attacks. Security information and event management (SIEM) tools and fine-grained auditing are discussed in Chapter Five. These tools aim at collecting, analyzing, and correlating -- in real-time -- any information and event that may be relevant for the security of an organization. As such, they can be a key element in finding a solution to such undesirable insider threats. Chapter Six goes on to provide a survey of techniques for separation-of-duty (SoD). SoD is an important principle that, when implemented in systems and tools, can strengthen data protection from malicious insiders. However, to date, very few approaches have been proposed for implementing SoD in systems. In Chapter Seven, a short survey of a commercial product is presented, which provides different techniques for protection from malicious users with system privileges -- such as a DBA in database management systems. Finally, in Chapter Eight, the book concludes with a few remarks and additional research directions. how far the e-entrepreneurs' shares fell in the market, the fact remains that there is still confidence in electronic trading. At least it would appear that investors are confident in e-companies again. However, not only trust of venture capitalists is of importance -- consumers also have to have faith in on-line business. After all, without consumers there is no e-business. Interacting lawyers, technicians and economists are needed to create a trustworthy electronic commerce environment. To achieve this environment, thorough and inter-disciplinary research is required and that is exactly what this book is about. Researchers of the project Enabling Electronic Commerce from the Dutch universities of Tilburg and Eindhoven have chosen a number of e-topics to elaborate on trust from their point of view. This volume makes clear that the various disciplines can and will play a role in developing conditions for trust and thus contribute to a successful electronic market.
