Winner of the 2020 Textbook Excellence Award from the Textbook & Academic Authors Association (TAA) Chronologically organized, *Child Development From Infancy to Adolescence, Second Edition* presents topics within the field of child development through unique and highly engaging Active Learning opportunities. The Active Learning features foster a dynamic and personal learning process for students. Within each chapter, authors Laura E. Levine and Joyce Munsch introduce students to a wide range of real-world applications of psychological research to child development. Pedagogical features help students discover the excitement of studying child development and equip them with skills they can use long after completing the course. This title is accompanied by a complete teaching and learning package. Contact your SAGE representative to request a demo. Digital Option / Courseware SAGE Vantage is an intuitive digital platform that delivers this text's content and course materials in a learning experience that offers auto-graded assignments and interactive multimedia tools, all carefully designed to ignite student engagement and drive critical thinking. Built with you and your students in mind, it offers simple course set-up and enables students to better prepare for class. Learn more. Assignable Video with Assessment Assignable video (available with SAGE Vantage) is tied to learning objectives and curated exclusively for this text to bring concepts to life. The Development of Children

Human capital theory, developing children as future workers, shapes thinking about early childhood education policy around the globe. International contributors problematize this thinking and offer alternatives.

The Development of Children

What makes a good school? A prominent Harvard educator looks for the answers in six schools that have earned reputations for excellence: George Washington Carver High School in Atlanta; John F. Kennedy High School in the Bronx, New York; Highland Park High School near Chicago; Bookline High School in Brookline, Massachusetts; St. Paul's in Concord, New Hampshire; and the Milton Academy, near Boston.

The Development of Children

The landmark work on the social significance of childhood. The original and vastly influential ideas of Erik H. Erikson underlie much of our understanding of human development. His insights into the interdependence of the individuals' growth and historical change, his now-famous concepts of identity, growth, and the life cycle, have changed the way we perceive ourselves and society. Widely read and cited, his works have won numerous awards including the Pulitzer Prize and the National Book Award. Combining the insights of clinical psychoanalysis with a new approach to cultural anthropology, *Childhood and Society* deals with the relationships between childhood training and cultural accomplishment, analyzing the infantile and the mature, the modern and the archaic elements in human motivation. It was hailed upon its first publication as "a rare and living combination of European and American thought in the human sciences" (Margaret Mead, *The American Scholar*). Translated into numerous foreign languages, it has gone on to become a classic in the study of the social significance of childhood.

Narrative Analysis

This book presents a general overview of our current knowledge of language development in children. All the principal strands of language development are covered, including phonological, lexical, syntactic and pragmatic development; bilingualism; precursors to language development in infancy; and the language development of children with developmental disabilities, including children with specific language impairment. Written by leading international authorities, each chapter summarises clearly and lucidly our current state of knowledge, and carefully explains and evaluates the theories which have been proposed to account for children's development in that area.

The Third Chapter

When Franklin is hurt in a soccer game, his doctor sends him to the hospital to have the crack in his shell repaired.

The Development of Children + Read and Practice for the Development of Children, Six Month Access

Global Perspectives on Human Capital in Early Childhood Education

A sociologist explores the ways we leave one thing and move on to the next; how we anticipate, define and reflect on our departures; and our epiphanies that something is over and done with.

Parenting Matters

This interdisciplinary volume explores art, its development, and its role in the construction of knowledge. Presenting theory and research on artistic development as a cultural and creative endeavor, contributors examine the origins of human art during the Paleolithic cultural revolution, as part of a modern cultural transformation, in the growth of a creative artist, and in developing children. Target chapters expressing the disciplinary perspectives of psychology, archaeology, communications, education, and the performing arts are followed by commentaries from internationally acclaimed scholars of human development. Part 1 explores how cultures harness and exploit the arts to give expression to values, social practices, and traditions. This section traces the emergence of new art forms that arose during social unrest, including the symbolization of spiritual beliefs expressed on the walls of Paleolithic caves, and the racial identity and cultural values expressed in the media of the hip-hop generation. Part 2 examines the journeys of a composer and a group of students to highlight the process of becoming an artist and the role education plays in its development. The book concludes with a focus on the development of aesthetic appreciation and artistic activity in childhood and adolescence, including, for example, how a child's developing theory of mind affects appreciation for the arts, and how developing empathy and emotional regulation contribute to the cognitive and affective underpinnings of acting in adolescence. As a whole contributors explore the developmental, sociocultural, and evolutionary processes that make the creation and experience of art possible. Intended for researchers and advanced students in both human development and the arts, this book will also serve as a textbook for advanced courses on psychology and the arts and/or special topics courses in cognitive and/or human development.

The Cultural Nature of Human Development

Among glass craftsmen active in the 1st century A.D., the most famous and gifted was Ennion, who hailed from the coastal city of Sidon in modern Lebanon. Ennion's glass stood out for its quality and popularity. His products are distinguished by the fine detail and precision of their relief decoration, which imitates designs found on contemporaneous silverware. This compact, but thorough volume examines the most innovative and elegant known examples of Roman mold-blown glass, providing a uniquely comprehensive, up-to-date study of these exceptional works. Included are some twenty-six remarkably preserved examples of drinking cups,

bowls, and jugs signed by Ennion himself, as well as fifteen additional vessels that were clearly influenced by him. The informative texts and illustrations effectively convey the lasting aesthetic appeal of Ennion's vessels, and offer an accessible introduction to an ancient art form that reached its apogee in the early decades of the Roman Empire.

Human Motor Development

This popular textbook has long been acclaimed for its authoritative chronological exploration of how the lives of children are shaped by biological and cultural factors. Lead author Cynthia Lightfoot builds on the legacy of original authors Michael and Sheila Cole, offering a lively, engaging, and always accessible examination of child development as a process involving the whole child within multiple, mutually influencing contexts. Throughout, the emphasis is on how the interaction of biology and culture contributes both to the universal pathways of development shared by all children and to the diverse developmental patterns that unfold in the lives of individual children. This is an accessible introduction to Developmental Psychology for students taking courses that focus on child and adolescent development.

The Emotional Life of the Toddler

A collection on classic and contemporary articles to use as a supplement in undergraduate developmental psychology courses or to provide a springboard for discussion in graduate-level seminars. Offers 32 primary-source articles, 17 of them new to this third edition. Each reading is preceded by a capsule summary that provides a context for understanding, and is followed by new discussion questions. The editors are affiliated with the University of California-Riverside and the University of California-San Diego. Annotation copyrighted by Book News, Inc., Portland, OR

The Development of Children and Adolescents

"This book represents a new approach to language acquisition and to variable properties in language. By taking a novel approach in allowing for an account of the acquisition of variable properties of language and a biologically plausible treatment of language variation, Lightfoot argues against the use of binary parameters, for the centrality of parsing in language acquisition, and for the "openness" of Universal Grammar"--

Born to Parse

This popular textbook is an authoritative chronological exploration of how the lives of children are shaped by biological and cultural factors. The books offers a lively, engaging, and always accessible examination of child development as a process involving the whole child within multiple, mutually influencing contexts. Throughout, the emphasis is on how the interaction of biology and culture contributes both to the universal pathways of development shared by all children and to the diverse developmental patterns that unfold in the lives of individual

children. This is an accessible introduction to Developmental Psychology for students taking courses that focus on child and adolescent development. This book can also be purchased with the breakthrough online resource, LaunchPad, which offers innovative media content, curated and organised for easy assignability. LaunchPad's intuitive interface presents quizzing, flashcards, animations and much more to make learning actively engaging.

The Essential Conversation

The 'Get to Know Me' series is made up of resources aimed at children with additional needs and those who support them in the classroom. Developed by child psychologist Dr Louise Lightfoot and illustrated by Catherine Hicks, the series includes activities specific to anxiety, depression and Obsessive Compulsive Disorder (OCD). This book, *Draw Along Sammy Sloth*, is an activity-based picture book story, in which individual children are encouraged to interact with the story in a creative way - through writing, drawing, scrap booking, collage, activities etc. Active engagement helps children to understand and process information, and aids long-term recall. It has been designed to support the individual child and encourage an empathetic and inclusive environment. In this book, we meet Sammy, a sloth who lives in a beautiful tree by the sea. The story follows Sammy as he wakes up one day to find he feels funny and strange. He can't sit still and does not feel like his usual happy and relaxed self. After pacing up and down he meets Anna the Armadillo who tells Sammy that he is silly and has no right to be sad when his life is good. Sammy hears this and feels embarrassed and ashamed of how he has been feeling. Sammy hides away until he meets a kind lizard who shows him kindness and empathy. This book was written with children with anxiety in mind, providing an opportunity to relate to Sammy's thoughts, feelings, behaviours and experiences. However, children with a range of needs may benefit from the story. The book is written in a narrative style, so it does not use diagnostic labels and is not intended for this purpose. Instead the focus is on creating a common language which children can understand and use to make sense of how they are feeling. A practitioner guidebook is also available (ISBN 9780815349419).

Child Development

From growing their children, parents grow themselves, learning the lessons their children teach. "Growing up", then, is as much a developmental process of parenthood as it is of childhood. While countless books have been written about the challenges of parenting, nearly all of them position the parent as instructor and support-giver, the child as learner and in need of direction. But the parent-child relationship is more complicated and reciprocal; over time it transforms in remarkable, surprising ways. As our children grow up, and we grow older, what used to be a one-way flow of instruction and support, from parent to child, becomes instead an exchange. We begin to learn from them. The lessons parents learn from their offspring—voluntarily and involuntarily, with intention and serendipity, often through resistance and struggle—are embedded in their evolving relationships and shaped by the rapidly transforming world around them. With *Growing Each Other Up*, MacArthur Prize-winning sociologist and educator Sara Lawrence-Lightfoot offers an intimately detailed, emotionally powerful account of

that experience. Building her book on a series of in-depth interviews with parents around the country, she offers a counterpoint to the usual parental development literature that mostly concerns the adjustment of parents to their babies' rhythms and the ways parents weather the storms of their teenage progeny. The focus here is on the lessons emerging adult children, ages 15 to 35, teach their parents. How are our perspectives as parents shaped by our children? What lessons do we take from them and incorporate into our worldviews? Just how much do we learn—often despite our own emotionally fraught resistance—from what they have seen of life that we, perhaps, never experienced? From these parent portraits emerges the shape of an education composed by young adult children—an education built on witness, growing, intimacy, and acceptance. *Growing Each Other Up* is rich in the voices of actual parents telling their own stories of raising children and their children raising them; watching that fundamental connection shift over time. Parents and children of all ages will recognize themselves in these evocative and moving accounts and look at their own growing up in a revelatory new light.

Child Development From Infancy to Adolescence

How Children Develop has established itself as the topically organized textbook teachers and researchers trust for the most up-to-date perspectives on child development. The authors, each a well-known scientist and educator--have earned that trust by introducing core concepts and impactful discoveries with an unparalleled integration of theory, cultural research, and applications, all in a style that is authoritative yet immediately understandable and relevant to students. The new edition has been rigorously updated and welcomes co-author Elizabeth Gershoff (The University of Texas at Austin), who brings a breadth of research and teaching experience to the discussions of social and emotional development. It is also more interactive than ever before, with richer integration between the book and its interactive study features in LaunchPad.

Tar Beach

The Development of Children and Adolescents, by Penny Hauser-Cram, J. Kevin Nugent, Kathleen Thies, and John F. Travers, provides an integrated view of child development. Presenting the most pertinent research for each developmental stage and linking this to practical applications in the areas of Parenting, Policy, and Practice, this balanced approach emphasizes the relationship between research and theory and applications. The rich media program, including WileyPLUS with Real Development promotes active learning and allows for increased understanding and comprehension of the course content. Real Development, authored by Nicole Barnes, Ph.D., Montclair State University and Christine Hatchard, Psy.D., Monmouth University, uses authentic video showcasing real families, along with activities and assessments that put students in the place of a professional, to gain an understanding of key concepts. Through the combination of text and media, students are engaged in meaningful learning that deepens and enriches their understanding of developmental concepts. WileyPLUS sold separately from text.

Ennion: Master of Roman Glass

Now updated with new material throughout, Alicia F. Lieberman's *The Emotional Life of the Toddler* is the seminal, detailed look into the varied and intense emotional life of children aged one to three. Hailed as "groundbreaking" by *The Boston Globe* after its initial publication, the new edition includes the latest research on this crucial stage of development. Anyone who has followed an active toddler around for a day knows that a child of this age is a whirlwind of explosive, contradictory, and ever-changing emotions. Alicia F. Lieberman offers an in-depth examination of toddlers' emotional development, and illuminates how to optimize this crucial stage so that toddlers can develop into emotionally healthy children and adults. Drawing on her lifelong research, Dr. Lieberman addresses commonly asked questions and issues. Why, for example, is "no" often the favorite response of the toddler? How should parents deal with the anger they might feel when their toddler is being aggressively stubborn? Why does a crying toddler run to his mother for a hug only to push himself vigorously away as soon as she begins to embrace him? This updated edition also addresses twenty-first century concerns such as how to handle screen time on devices and parenting in a post-internet world. With the help of numerous examples and vivid cases, Lieberman answers these and other questions, providing, in the process, a rich, insightful profile of the roller coaster emotional world of the toddler.

Foundations of Psychological Testing

Like children themselves, development is dynamic. In the chronologically organized *Child and Adolescent Development in Context*, award-winning author Tara L. Kuther frames development research in real-life contexts, including gender, race and ethnicity, socioeconomic status, and more. Kuther presents highly relatable examples, vivid cross-cultural stories, and case studies of real individuals, consistently prompting students to reflect on chapter content with *What do you think?* questions. The book emphasizes three core themes: the centrality of context, the importance of research, and the applied value of developmental science; students will come away with an understanding of these themes that they will immediately be able to apply to their own lives and future careers.

This detailed study guide helps students to understand and retain the material in 'The Development of Children' at an even higher level than by reading the text alone. Each chapter includes practice tests and exercises, key concept reviews, guided study questions and section reviews.

How Children Develop

Based on interviews with forty-one teenagers, Lightfoot argues that adolescent risk-taking is necessary in establishing a sense of self and peer group identities

The Development of Language

This detailed study guide helps students to understand and retain the text material at a higher level than they are likely to achieve by reading the text alone. Each chapter includes a variety of practice tests and exercises to help integrate themes that reappear in various chapters. Each chapter also includes a review of key concepts, guided study questions, and section reviews.

The Culture of Adolescent Risk-taking

Foundations of Psychological Testing: A Practical Approach by Leslie A. Miller and Robert L. Lovler presents a clear introduction to the basics of psychological testing as well as psychometrics and statistics. Aligned with the 2014 Standards for Educational and Psychological Testing, this practical book includes discussion of foundational concepts and issues using real-life examples and situations that students will easily recognize, relate to, and find interesting. A variety of pedagogical tools furthers the conceptual understanding needed for effective use of tests and test scores. The Sixth Edition includes updated references and examples, new In Greater Depth boxes for deeper coverage of complex topics, and a streamlined organization for enhanced readability.

Readings on the Development of Children

Illus. in full color. "Ringgold recounts the dream adventure of eight-year-old Cassie Louise Lightfoot, who flies above her apartment-building rooftop, the 'tar beach' of the title, looking down on 1939 Harlem. Part autobiographical, part fictional, this allegorical tale sparkles with symbolic and historical references central to African-American culture. The spectacular artwork resonates with color and texture. Children will delight in the universal dream of mastering one's world by flying over it. A practical and stunningly beautiful book."--(starred) Horn Book.

Growing Each Other Up

Development is best understood as a fusion of biological, social, and psychological processes interacting in the unique medium of human culture. [In this text, the

authors] have tried to show not only the role of each of these factors considered separately but also how they interact in diverse cultural contexts to create whole, unique human beings.-Pref.

CourseSmart International E-Book for Development of Children

Healthy mental, emotional, and behavioral (MEB) development is a critical foundation for a productive adulthood. Much is known about strategies to support families and communities in strengthening the MEB development of children and youth, by promoting healthy development and also by preventing and mitigating disorder, so that young people reach adulthood ready to thrive and contribute to society. Over the last decade, a growing body of research has significantly strengthened understanding of healthy MEB development and the factors that influence it, as well as how it can be fostered. Yet, the United States has not taken full advantage of this growing knowledge base. Ten years later, the nation still is not effectively mitigating risks for poor MEB health outcomes; these risks remain prevalent, and available data show no significant reductions in their prevalence. *Fostering Healthy Mental, Emotional, and Behavioral Development in Children and Youth: A National Agenda* examines the gap between current research and achievable national goals for the next ten years. This report identifies the complexities of childhood influences and highlights the need for a tailored approach when implementing new policies and practices. This report provides a framework for a cohesive, multidisciplinary national approach to improving MEB health.

Fostering Healthy Mental, Emotional, and Behavioral Development in Children and Youth

'The Development of Children' aims to provide students with a broad framework for understanding children's development. Written by a team of experts, topics covered include infancy, early childhood, diseases, and mental development.

The Good High School

This detailed study guide helps students to understand and retain the material in 'The Development of Children' at an even higher level than by reading the text alone. Each chapter includes practice tests and exercises, key concept reviews, guided study questions and section reviews.

Child and Adolescent Development in Context

An unabridged republication of the 1921 classic in which Lightfoot encounters animal friends Peter Rabbit, Sammy Jay, Paddy the Beaver and others.

The Development of Children

Three-year-old Kwara'ae children in Oceania act as caregivers of their younger siblings, but in the UK, it is an offense to leave a child under age 14 ears without adult supervision. In the Efe community in Zaire, infants routinely use machetes

with safety and some skill, although U.S. middle-class adults often do not trust young children with knives. What explains these marked differences in the capabilities of these children? Until recently, traditional understandings of human development held that a child's development is universal and that children have characteristics and skills that develop independently of cultural processes. Barbara Rogoff argues, however, that human development must be understood as a cultural process, not simply a biological or psychological one. Individuals develop as members of a community, and their development can only be fully understood by examining the practices and circumstances of their communities.

Transforming the Workforce for Children Birth Through Age 8

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well.

Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Lightfoot the Deer

A lively and engaging new edition, this book examines child development as a process involving the whole child within multiple, mutually influencing contexts. With an emphasis on biological and cultural factors, it explores the pathways of development shared by all children plus the diverse developmental patterns that unfold in them as individuals. • Continued emphasis on the biocultural perspective: this continues to provide an integrated, conceptual framework for understanding

development. • New research: there is a focus on the latest research on executive function, including its role in school achievement. Coverage of advances in neuroscience continues, emphasizing the relationship between brain development and the child's experience. There is an exploration of new research into how the prenatal environment affects subsequent development and health. • New focus on media: there is a more thorough and expansive presentation of children's use of interactive media and communications technology, emphasizing implications for cognitive development and social relationships. • New emphasis on culture and biology: the joint roles of biology and culture are examined with respect to how they affect the development of mental and physical health problems, including obesity, eating disorders, and suicide The cultural contexts of parenting practices and sibling relationships are discussed in light of new research.

The Development of Children Study Guide

With the insights she has gleaned from her close and subtle observation of parent-teacher conferences, renowned Harvard University professor Sara Lawrence-Lightfoot has written a wise, useful book about the ways in which parents and teachers can make the most of their essential conversation—the dialogue between the most vital people in a child's life. “The essential conversation” is the crucial exchange that occurs between parents and teachers—a dialogue that takes place more than one hundred million times a year across our country and is both mirror of and metaphor for the larger cultural forces that define family-school relationships and shape the development of our children. Participating in this twice-yearly ritual, so friendly and benign in its apparent goals, parents and teachers are often wracked with anxiety. In a meeting marked by decorum and politeness, they frequently exhibit wariness and assume defensive postures. Even though the conversation appears to be focused on the student, adults may find themselves playing out their own childhood histories, insecurities, and fears. Through vivid portraits and parables, Sara Lawrence-Lightfoot captures the dynamics of this complex, intense relationship from the perspective of both parents and teachers. She also identifies new principles and practices for improving family-school relationships. In a voice that combines the passion of a mother, the skepticism of a social scientist, and the keen understanding of one of our nation's most admired educators, Lawrence-Lightfoot offers penetrating analysis and an urgent call to arms for all those who want to act in the best interests of their children. For parents and teachers who seek productive dialogues and collaborative alliances in support of the learning and growth of their children, this book will offer valuable insights, incisive lessons, and deft guidance on how to communicate more effectively. In *The Essential Conversation*, Sara Lawrence-Lightfoot brings scholarship, warmth, and wisdom to an immensely important cultural subject—the way we raise our children.

Childhood and Society

Each chapter emphasizes theory and the ways of thinking about research by means of studies that chapter authors have used in their own research. The authors detail how their own research stands as an example of narrative inquiry conducted within a literary, cultural, social, or historical frame. In addition, they explain the problems and limits of narrative analysis, as well as the rationale and

methods they found most compelling, with an eye toward improving future inquiry.

The Development of Children

Rev. ed. of: Development of children / Michael Cole, Sheila R. Cole, Cynthia Lightfoot. c2005. 5th ed.

The Development of Children Study Guide

Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

The Development of Children

In the twenty-first century, a developmental phase of life is emerging as significant and distinct, capturing our interest, engaging our curiosity, and expanding our understanding of human potential and development. Demographers talk about this new chapter in life as characterized by people—between fifty and seventy-five—who are considered "neither young nor old." In our "third chapters" we are beginning to redefine our views about the casualties and opportunities of aging; we are challenging cultural definitions of strength, maturity, power, and sexiness. This is a chapter in life when the traditional norms, rules, and rituals of our careers

seem less encompassing and restrictive; when many women and men seem to be embracing new challenges and searching for greater meaning in life. In The Third Chapter, the renowned sociologist Dr. Sara Lawrence-Lightfoot offers a strong counterpoint to the murky ambivalence that shrouds our clear view of people in their third chapters. She challenges the still prevailing and anachronistic images of aging by documenting and revealing the ways in which the years between fifty and seventy-five may, in fact, be the most transformative and generative time in our lives, tracing the ways in which wisdom, experience, and new learning inspire individual growth and cultural transformation. The women and men whose voices fill the pages of The Third Chapter tell passionate and poignant stories of risk and vulnerability, failure and resilience, challenge and mastery, experimentation and improvisation, and insight and new learning.

Art and Human Development

This book provides an overview of human development and includes the relationship between motor development and cognitive and social development. It explores factors affecting development, including effects of early stimulation and deprivation. The book addresses assessment in motor development.

Franklin Goes to the Hospital

In the Third Edition of the topically organized *Child Development: An Active Learning Approach*, authors Laura E. Levine and Joyce A. Munsch invite students to take an active journey toward understanding the latest findings from the field of child development. Using robust pedagogical tools built into the chapter narratives, students are challenged to confront myths and misconceptions, participate in real-world activities with children and independently, and utilize video resources and research tools to pursue knowledge and develop critical thinking skills on their own. This new edition covers the latest findings on developmental neuroscience, positive youth development, the role of fathers, and more, with topics of diversity and culture integrated throughout. More than a textbook, this one-of-a-kind resource will continue to serve students as they go on to graduate studies, to work with children and adolescents professionally, and to care for children of their own.
